

PYTHON PROGRAMMING FOR BEGINNERS

LEARN CODING IN 7 DAYS:

CRASH COURSE INTRODUCTION TO PROGRAMMING

J O H N R E E D

CHAPTER 1. Setting Up your Environment

The first thing you need to do with Python is to install it.

If you are using an account on a remote server, your ISP may have already installed Python 3. If you are using Linux at home, you may already have Python 3 in this case too. Most popular GNU / Linux distributions include Python 2 in the own default installation; the number of distributions that also include Python 3 is limited, but steadily increasing. Mac OS X includes a command line version of Python 2, but at the time of writing it does not include Python 3. Microsoft Windows does not include any version of Python. But don't despair! You can pave the way towards installing Python with a mouse click, regardless of which operating system you use.

The easiest way to check if you have Python 3 on your Linux or Mac OS X system is to use the command line. On Linux, look for a program called Terminal in your Applications menu. (It could be in a submenu like Accessories or System Tools.) On Mac OS X, there is an application called Terminal.app in your / Applications / Utilities / folder.

Once you are at the command line prompt, simply type `python3` (all in lowercase, no spaces) and see what happens. On my home Linux system Python 3 is already installed, so this command brings me into the interactive Python shell.

```
mark@ubuntu:~$ python3
Python 3.6.1+ (tags: 4555a, Apr 15 2019, 17:21:52)
[GCC 4.8.3] on linux
Type "help()", "copyright()", "credits()" or "license()" for further information.
>>>
```

So going back to the question this section started with, "Which Python do you need?" Whatever is already installed on the computer you have.

Quick Connect Programming Guide
