L. Gomez, Blanca E. Himes, Naftali Kaminski, 2020-01-30 This book serves as the primary reference for precision medicine in the fields of pulmonary critical care and sleep medicine by documenting principles written by experts in several aspects of precision medicine. It combines fundamental concepts of the field with state of the art studies and how they translate into individual preventive diagnostic and therapeutic plans. Precision medicine is focused on the integration of individual variability with disease prevention and treatment principles derived from population studies. This concept has risen to prominence in recent years in parallel with advances in genetics, molecular diagnostics, and novel target specific therapies. This fundamental shift in the approach to treatment has broad implications in how we prevent, diagnose, and treat disease. Describing key concepts of precision medicine and relating these to pulmonary critical care and sleep disorders is essential to educate relevant stakeholders and increase the impact of pulmonary precision medicine. The book is organized into seven sections: introduction, genetics, biomarkers, precise phenotyping, mobile health, wearables, and telemedicine, precision therapeutics, and enabling widespread adoption of precision medicine. The chapters are organized with an introduction to the specific theme followed by its basic concepts. They then delve into how these basic concepts relate to the larger theme of precision medicine, new precision medicine approaches to dealing with these problems, and key takeaway points. Liberally illustrated with images, figures, and tables, the text is thorough and intuitive for clinicians and researchers to learn the processes and applications of precision medicine. This is an ideal guide for clinicians to learn new precision medicine concepts in the fields of genetics, genomics, mobile health, and how they apply to their practice and their patients, as well as researchers seeking a basic understanding of precision medicine to assist in designing future research studies. Cycle provides an overview of sampling for environmental purposes and monitoring of environmentally relevant variables at mining sites. It focuses on environmental sampling and monitoring of surface water and also considers groundwater process water streams rock soil and other media including air and biological organisms. The handbook includes an appendix of technical summaries written by subject matter experts that describe field measurements collection methods and analytical techniques and procedures relevant to environmental sampling and monitoring. The sixth of a series of handbooks on technologies for management of metal mine and metallurgical process drainage, this handbook supplements and enhances current literature and provides an awareness of the critical components and complexities involved in environmental sampling and monitoring at the mine site. It differs from most information sources by providing an approach to address all types of mining influenced water and other sampling media throughout the mine life cycle. Sampling and Monitoring for the Mine Life Cycle is organized into a main text and six appendices that are an integral part of the handbook. Sidebars and illustrations are included to provide additional detail about important concepts to present examples and brief case studies and to suggest resources for further information. Extensive references are included.

Standard Operating Procedures Analytical Chemistry and Metabolism I.P. Sword, A.W. Waddell, 2012-12-06. This is the fourth volume of Standard Operating Procedures. SOPs compiled from documents prepared in these laboratories in part fulfilment of the requirements of various Good Laboratory Practice (GLP) regulations and guidelines. SOPs have now become an everyday feature of work in most industrial and contract toxicology laboratories. They provide a written definition of the mechanics of unit operations which together comprise the framework for experiments in safety evaluation. Metabolic studies and analytical chemistry are closely linked to toxicology since they embody essential aspects of the overall assessment of product safety. Some authorities consider certain parts of these subjects to be outwith the scope of the GLP requirements but for the reasons stated this is contrary to our own view. We have tried where possible to define in SOP format for use in our own laboratories the unit operations involved in these disciplines and they form the basis of this volume. Some relevant material from previous volumes has been brought together in updated form and is also presented here for completeness. Dr I P Sword, Managing Director, Inveresk Research International, Musselburgh EH21 7UB, Scotland.
