ICIIS 2019 JM Muslimin, Kusmana Kusmana, Yusuf Durachman, Husni Teja Sukmana, Dewi Khairani, 2020-05-04. The event to provide a scientific forum that will appeal to them: individual scholars, practitioners, policy makers, especially postgraduate students, to present their experiences, research findings, sharing ideas and experiences. For the nature of the object being discussed is interdisciplinary, the Post Graduate School SPS of Syarif Hidayatullah State Islamic University Jakarta is called to organize International Colloquium on Interdisciplinary Studies 2019 ICIIS 2019 with the theme Moslem Societies and Social Transformation. In 2019, this event has been held in 7-9 November 2019 in the Post Graduate School of Syarif Hidayatullah State Islamic University Jakarta. It is the conjunction with the 3rd International Conference on Quran and Hadith Studies ICONQUHAS2019. The event is jointly organized and hosted by Postgraduate School Faculty of Theology Ushuluddin of Syarif Hidayatullah State Islamic University Jakarta, Paramadina University, and Islamic University of Jakarta. The conference papers from any kind of stakeholders and interdisciplinary studies related with Religion and Social Related Studies. Each contributed paper was refereed before being accepted for publication. The double-blind peer-reviewed was used in the paper selection.

Mobile and Ubiquitous Systems: Computing, Networking and Services Arkady Zaslavsky, Zhaolong Ning, Vana Kalogeraki, Dimitrios Georgakopoulos, Panos K. Chrysanthos, 2024-07-18. Mobile Security Products for Android Philipp Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google's Android operating system. Our report covers details of the products made by leading manufacturers. Smartphones represent the future of modern communications. In 2013 more than 1 billion smartphones were sold a further milestone in the advance of these devices¹. A study published by Facebook emphasises the importance of smartphones in our lives: about 80% of users make use of their smartphone within 15 minutes of waking up each day. At the same time the traditional function of a telephone is becoming less and less important. The high quality of integrated cameras means that the smartphone is increasingly used for photography. As well as with photos users trust their devices with their most personal communications such as Facebook, WhatsApp and email. This brings some risks with it as such usage makes the smartphone interesting for criminals who attempt to infect the device with malware or steal personal data. There is also the danger brought by phishing attacks. These days the use of security software on a PC or laptop is seen as essential. However many smartphone users do not yet have the same sense of responsibility even though their devices store personal data: private photos, Internet banking information or even company data. As modern smartphones are often expensive to buy they are also an attractive target for thieves. Top quality smartphones cost several hundred Euros. As it is not possible to physically prevent them from being stolen they must be made less attractive to thieves. Consequently many of today's security products contain not only malware protection but also highly developed theft protection functions which make the device less attractive to thieves e.g. by locking the device and help the owner to find it again.

Artificial Intelligence for Edge Computing Mudhakar Srivatsa, Tarek Abdelzaher, Ting He, 2023-12-21 It is undeniable that the recent revival of artificial intelligence (AI) has significantly changed the landscape of science in many application domains ranging from health to defense and from conversational interfaces to autonomous cars. With terms such as Google Home, Alexa and ChatGPT becoming household names the pervasive societal impact of AI is clear. Advances in AI promise a revolution in our interaction with the physical world, a domain where computational intelligence has always been envisioned as a transformative force toward a better tomorrow. Depending on the application family this domain is often referred to as Ubiquitous Computing, Cyber Physical Computing or the Internet of Things. The underlying vision is driven by the proliferation of cheap embedded computing hardware that can be integrated easily into myriads of everyday devices from consumer electronics such as personal wearables and smart household appliances to city infrastructure and industrial process control systems. One common trait across these applications is that the data that the application operates on come directly, typically via sensors.

from the physical world Thus from the perspective of communication network infrastructure the data originate at the network edge From a performance standpoint there is an argument to be made that such data should be processed at the point of collection Hence a need arises for Edge AI a genre of AI where the inference and sometimes even the training are performed at the point of need meaning at the edge where the data originate The book is broken down into three parts core problems distributed problems and other cross cutting issues It explores the challenges arising in Edge AI contexts Some of these challenges such as neural network model reduction to fit resource constrained hardware are unique to the edge environment They need a novel category of solutions that do not parallel more typical concerns in mainstream AI Others are adaptations of mainstream AI challenges to the edge space An example is overcoming the cost of data labeling The labeling problem is pervasive but its solution in the IoT application context is different from other contexts This book is not a survey of the state of the art With thousands of publications appearing in AI every year such a survey is doomed to be incomplete on arrival It is also not a comprehensive coverage of all the problems in the space of Edge AI Different applications pose different challenges and a more comprehensive coverage should be more application specific Instead this book covers some of the more endemic challenges across the range of IoT CPS applications To offer coverage in some depth we opt to cover mainly one or a few representative solutions for each of these endemic challenges in sufficient detail rather than broadly touching on all relevant prior work The underlying philosophy is one of illustrating by example The solutions are curated to offer insight into a way of thinking that characterizes Edge AI research and distinguishes its solutions from their more mainstream counterparts

Smart Organizations and Smart Artifacts Leonardo Caporarello, Beniamino Di Martino, Marcello Martinez, 2014-05-15 This book offers a multidisciplinary strategy for finding new and more effective human computer interaction approaches in particular from a socio technical perspective that facilitate the exploration and exploitation of benefits that information technologies IT offer organizations Though the relationship between IT and organizations is certainly very strong it is also one of the greatest obstacles to securing benefits from their interaction The participation of organizational users in the planning and design stages of IT interfaces is the main area of human computer interaction where a wealth of contributions are positively enriching both the academic and management discussions Thus a new approach for managing this relationship is needed one in which the different stakeholders are suitably taken into account Moreover the outstanding success of the 2.0 phenomenon offers an example of a relevant platform where human computer interaction has been widely developed and exploited Consequently this will influence and already is influencing the way IT and users interact with each other The book is based on a selection of the best papers original double blind peer reviewed contributions from the annual conference of the Italian chapter of the AIS held in Milan Italy in December 2013

Smartphone-Based 3D Indoor Localization and Navigation Frank Ebner,2021-01-10 During the last century navigation systems have become ubiquitous and guide drivers cyclists and pedestrians towards their desired destinations While operating worldwide they rely on line of sight conditions towards satellites and are thus limited to outdoor areas However finding a gate within an airport a ward within a hospital or a university s auditorium also represent navigation problems To provide navigation within such indoor environments new approaches are required This thesis examines pedestrian 3D indoor localization and navigation using commodity smartphones A desirable target platform always at hand and equipped with a multitude of sensors The IMU accelerometer gyroscope magnetometer and barometer allow for pedestrian dead reckoning that is estimating relative location changes Absolute whereabouts can be determined via Wi Fi an infrastructure present within most public buildings or by using Bluetooth Low Energy Beacons as inexpensive supplement The building s 3D floorplan not only enables navigation but also increases accuracy by preventing impossible movements and serves as a visual reference for the pedestrian All aforementioned information is fused by recursive density estimation based on a particle filter The conducted experiments cover both theoretical backgrounds and real world use cases All discussed approaches utilize the infrastructure found within most public buildings are easy to set up and maintain Overall this thesis results in an indoor localization and navigation system that can be easily deployed without requiring any special hardware components

Designing Apps for Success Matthew David,Chris Murman,2014-02-03 In 2007 Apple released the iPhone With this release came tools as revolutionary as the internet was to businesses and individuals back in the mid and late nineties Apps Much like websites drove and still drive business so too do apps drive sales efficiencies and communication between people But also like web design and development in its early years and iterations guidelines and best practices for apps are few and far between Designing Apps for Success provides web app designers and developers with consistent app design practices that result in timely appropriate and efficiently capable apps This book covers application lifecycle management that designers and developers use when creating apps for themselves or the entities that hired them From the early discussions with a company as to how to what kind of app they want to storyboarding to developing cross platform to troubleshooting to publishing Designing Apps for Success gives a taut concise and pragmatic roadmap from the beginning of the process all the way to the end Developers and designers will learn not only best practices on how to design an app but how to streamline the process while not losing any
