

Laboratory: Human Population Growth

Mrs. Côté

Answer Key

Enviro. Science 120

Pre Lab Work:

Before beginning this laboratory, answer the following questions on your own piece of paper in your notebook:

- Define the following terms:
 - growth rate – describes how fast a population is increasing or decreasing and is dependent upon the birth rate and death rate
 - birthrate – is the number of infants born in a given year/1000 people in the population
 - death rate – is the number of people who die in a given year/1000 individuals in the population
 - zero population growth – when the population is in equilibrium or the number of births and deaths are equal
 - developed country – countries that highly developed economy and advanced technology
 - developing country – countries that are considered to have low standard of living, and undeveloped industrially
 - demographic transition – refers to the transition from high birth and death rates to low birth and death rates
- What is a population explosion? How quickly is our population growing each year? What about each day?
A population explosion is when a population lacks limited resources so is able to grow out of control. The human population is grows about 80 million a year and 219, 178 each day.
- How is the growth rate of the human population calculated?
 $\text{Growth rate} = \text{birth rate} - \text{death rate}$
- What causes a negative population growth? What causes a positive population growth?
Negative population growth occurs when the birth rate is less than the death rate
Positive population growth occurs when the birth rate exceeds the death rate
- Why do the two graphs appear to have a different shape?
The population growth rate was much slower in the earlier years. The J-curve shows exponential population growth and the graphs are not drawn to the same scale.
- Using a piece of paper, create the following charts:

Country	Birthrate (%)	Death rate (%)	Population Growth 2005	Population Growth 2050	Demographic Transition	Relative Place in Transition	Sketch graph showing Blue & Pink Line
USA	2.06	0.51	0.92	-0.06	1.55	5

Calculus Roberto Smith, Schor, (Schor) Schor, 1995-01-02 *Statistical Computation for Environmental Sciences in R* James S. Clark, 2007-06-03 The environmental sciences are undergoing a revolution in the use of models and data Facing ecological data sets of unprecedented size and complexity environmental scientists are struggling to understand and exploit powerful new statistical tools for making sense of ecological processes In *Models for Ecological Data* James Clark introduces ecologists to these modern methods in modeling and computation Assuming only basic courses in calculus and statistics the text introduces readers to basic maximum likelihood and then works up to more advanced topics in Bayesian modeling and computation Clark covers both classical statistical approaches and powerful new computational tools and describes how complexity can motivate a shift from classical to Bayesian methods Through an available lab manual the book introduces readers to the practical work of data modeling and computation in the language R Based on a successful course at Duke University and National Science Foundation funded institutes on hierarchical modeling *Models for Ecological Data* will enable ecologists and other environmental scientists to develop useful models that make sense of ecological data Consistent treatment from classical to modern Bayes Underlying distribution theory to algorithm development Many examples and applications Does not assume statistical background Extensive supporting appendixes Accompanying lab manual in R

Theoretical Ecology Ryan Chisholm, 2025-09-09 An accessible and wide ranging introduction to the concepts and tools of theoretical ecology Theoretical ecology explores the mechanisms that structure ecological communities using a variety of mathematical and computational tools Theoretical Ecology shows you how to translate ecological problems into mechanistic models using both mathematics and the programming language R The book teaches key concepts and core quantitative skills while also devoting significant attention to the reasons for building mathematical ecological models Why do species populations fluctuate over time and space How do multiple species coexist What forces drive nutrient and carbon cycles Does

higher species diversity lead to higher biomass Each chapter in this incisive and informative book is motivated by questions like these and every chapter includes boxes that delve into mathematical details and provide coding examples in R Focuses on mathematical and computational methods while also drawing on conceptual and graphical approaches and explores how the various approaches complement one another Teaches students the skills they need to implement and analyze ecological models in R Covers topics ranging from single species competition and predator prey models to community ecology island biogeography and nutrient flux models Provides exercises of graduated difficulty at the end of every chapter Ideal for advanced undergraduate and graduate classrooms and for independent study Includes a road map for class planning and self study

Dr. Calhoun's Mousery Lee Alan Dugatkin,2024-10-03 A bizarre and compelling biography of a scientist and his work using rodent cities to question the potential catastrophes of human overpopulation It was the strangest of

experiments What began as a utopian environment where mice had sumptuous accommodations had all the food and water they could want and were free from disease and predators turned into a mouse hell Science writer and animal behaviorist Lee Alan Dugatkin introduces readers to the peculiar work of rodent researcher John Bumpass Calhoun In this enthralling tale Dugatkin shows how an ecologist turned psychologist turned futurist became a science rock star embedded in the culture of the 1960s and 1970s As interest grew in his rodent cities Calhoun was courted by city planners and his work was reflected in everything from Tom Wolfe s hard hitting writing to the children s book Mrs Frisby and the Rats of NIMH He was invited to meetings with the Royal Society and the pope and taken seriously when he proposed a worldwide cybernetic brain a decade before others made the internet a reality Readers see how Calhoun s experiments rodent apartment complexes like Mouse Universe 25 led to his concept of behavioral sinks with real effects on public policy discussions Overpopulation in Calhoun s mouse and rat complexes led to the loss of sex drive the absence of maternal care and a class of automatons that included the beautiful ones who spent their time grooming themselves while shunning socialization Calhoun and those who followed his work saw the collapse of this mouse population as a harbinger of the ill effects of an overpopulated human world Drawing on previously unpublished archival research and interviews with Calhoun s family and former colleagues Dugatkin offers a riveting account of an intriguing scientific figure Considering Dr Calhoun s experiments he explores the changing nature of scientific research and delves into what the study of animal behavior can teach us about ourselves *Prentice Hall*

Science Explorer: Teacher's ed ,2005 **Mathematics and Technology** Gilles Aldon,Fernando Hitt,Luciana Bazzini,Uwe Gellert,2017-04-05 This volume collects most recent work on the role of technology in mathematics education It offers fresh insight and understanding of the many ways in which technological resources can improve the teaching and learning of mathematics The first section of the volume focuses on the question how a proposed mathematical task in a technological environment can influence the acquisition of knowledge and what elements are important to retain in the design of mathematical tasks in computing environments The use of white smart boards platforms as Moodle tablets and smartphones have transformed the way we communicate both inside and outside the mathematics classroom Therefore the second section discussed how to make efficient use of these resources in the classroom and beyond The third section addresses how technology modifies the way information is transmitted and how mathematical education has to take into account the new ways of learning through connected networks as well as new ways of teaching The last section is on the training of teachers in the digital era The editors of this volume have selected papers from the proceedings of the 65th 66th and 67th CIEAEM conference and invited the correspondent authors to contribute to this volume by discussing one of the four important topics The book continues a series of sourcebooks edited by CIEAEM the Commission Internationale pour l Etude et l Amélioration de l Enseignement des Mathématiques International Commission for the Study and Improvement of Mathematics Education
