NOVA: Hunting the Elements

1. There are 118 unique substances (elements) arranged on an amazing chart that reveals their hidden secrets to anyone who knows how to read it.
2. All the gold ever mined would fit into a single cube about 60 feet on a side.
3. Three-quarters of the elements are metals.
4. How an atom reacts chemically depends on how willing it is to share electrons with others.
5. How much would a 60 pound block of gold be worth in dollars? \$ 1.5 million
6. List two things copper is used for:
Infrastructure, electronics, wiring, plumbing, and more
7. When copper is combined with another element, tin, it makes bronze, the first manmade metal alloy.
8. The number of protons determines what kind of element the atom is.
9. The number of protons is called the atomic number and it's the fundamental organizing principle of every table of the elements.
10. Metals are shiny, malleable materials that conduct electricity.
11. Most people think of calcium as white and chalky, but it's actually a silver, shiny metal.
12. Fiesta® ware bowls, like this one from the 1930s, gets its orange color from uranium, and it's actually dangerously radioactive.
