

Short Informative Speech on Smoking

Smoking is regarded as a fashion symbol in young boys. Despite the ill effects of smoking, people still continue to smoke. Many young boys, who start smoking, feel that they look broadminded and liberated if they smoke.

Most often, the teenagers adopt this habit just because of the company they enjoy. Sometimes, they take a puff from their friend's cigar. Later on, they develop the habit of smoking as an indispensable part of their lives. With the passage of time, the followers of this bad habit turn into chain smokers. It must be kept in mind that smoking is a toxic habit that may develop lungs' cancer. Moreover, the other toxic chemicals like arsenic, carbon Monoxide, methane, acetic acid, nicotine, butane and cadmium present in cigarettes are also highly damaging for health.

Currently, cigarette manufacturing companies are doing very well all over the globe. Such manufacturing companies also inscribe warnings on the packets of cigarettes; still people do not pay any heed. On the other hand, every year government increases the price of cigarettes to discourage people using tobacco. Yet smokers go on smoking and prove to be slaves of this bad habit.

The active smokers also harm other people around them known as passive smokers. Here, it is significant on the part of the government to keep a ban on advertisements that allure people to smoke. Moreover, the family members and close friends of the smoker should also play their part to aware the smoker about the bad effects of this habit. Although it requires strong will to stop smoking but once you plan to give up, you can definitely do.

Forensic DNA Trace Evidence Interpretation Duncan Taylor, Bas Kokshoorn, 2023-05-30 Forensic DNA Trace Evidence Interpretation Activity Level Propositions and Likelihood Ratios provides all foundational information required for a reader to understand the practice of evaluating forensic biology evidence given activity level propositions and to implement

the practice into active casework within a forensic institution The book begins by explaining basic concepts and foundational theory pulling together research and studies that have accumulated in forensic journal literature over the last 20 years The book explains the laws of probability showing how they can be used to derive from first principles the likelihood ratio used throughout the book to express the strength of evidence for any evaluation Concepts such as the hierarchy of propositions the difference between experts working in an investigative or evaluative mode and the practice of case assessment and interpretation are explained to provide the reader with a broad grounding in the topics that are important to understanding evaluation of evidence Activity level evaluations are discussed in relation to biological material transferred from one object to another the ability for biological material to persist on an item for a period of time or through an event the ability to recover the biological material from the object when sampled for forensic testing and the expectations of the prevalence of biological material on objects in our environment These concepts of transfer persistence prevalence and recovery are discussed in detail in addition to the factors that affect each of them The authors go on to explain the evaluation process how to structure case information and formulate propositions This includes how a likelihood ratio formula can be derived to evaluate the forensic findings introducing Bayesian networks and explaining what they represent and how they can be used in evaluations and showing how evaluation can be tested for robustness Using these tools the authors also demonstrate the ways that the methods used in activity level evaluations are applied to questions about body fluids There are also chapters dedicated to reporting of results and implementation of activity level evaluation in a working forensic laboratory Throughout the book four cases are used as examples to demonstrate how to relate the theory to practice and detail how laboratories can integrate and implement activity level evaluation into their active casework

Genes, Language, & Culture History in the Southwest Pacific Jonathan S. Friedlaender, 2007-04-19 The broad arc of islands north of Australia that extends from Indonesia east towards the central Pacific is home to a set of human populations whose concentration of diversity is unequaled elsewhere Approximately 20% of the worlds languages are spoken here and the biological and genetic heterogeneity among the groups is extraordinary Anthropologist W W Howells once declared diversity in the region so Protean as to defy analysis However this book can now claim considerable success in describing and understanding the origins of the genetic and linguistic variation there In order to cut through this biological knot the authors have applied a comprehensive battery of genetic analyses to an intensively sampled set of populations and have subjected these and complementary linguistic data to a variety of phylogenetic analyses This has revealed a number of heretofore unknown ancient Pleistocene genetic variants that are only found in these island populations and has also identified the genetic footprints of more recent migrants from Southeast Asia who were the ancestors of the Polynesians The book lays out the very complex structure of the variation within and among the islands in this relatively small region and a number of explanatory models are tested to see which best account for the observed pattern of genetic variation here The results suggest that a number of commonly used models of evolutionary divergence are overly simple in their assumptions and that often human diversity has accumulated in very complex ways

between Native Peoples of Alaska and California Cecil H. Brown, Kent G. Lightfoot, Nancy J. Turner, Dana Lepofsky, 2024-11-05

Linguistic and Genetic mtDNA Connections between Native Peoples of Alaska and California Ancient Mariners of the Middle Holocene traces the linguistic and biological connections between contemporary Aleut people of southwest Alaska and historic Utian people of central California During the Middle Holocene Period Aleut and Utian languages diverged from their common parent language Proto Aleut Utian PAU spoken by people who resided on or near Kodiak Island in coastal southwest Alaska Around the time of divergence Utians departed the PAU homeland migrating by watercraft along the eastern Pacific coast to the San Francisco Bay Area The affiliation between Aleut and Utian languages is strongly supported by comparative linguistics and by the genetic link mtDNA of groups speaking these languages On their migration Utians encountered coastal groups speaking languages different from their own Through these prolonged and intimate interactions words were borrowed from Utian into the languages of these native coastal communities Other significant findings explored in this book are the lack of compelling evidence for the kinship of Eskimo and Aleut peoples despite scholarship's long term acceptance of this proposal and the discovery of language structure features shared by Yeniseian and Na Dene indicating an historical connection for these circumarctic languages

Radiation-induced and oxidative DNA damages Antonio Monari, Elise Dumont, Chrysostomos Chatgililoglu, 2015-10-02 DNA stores and passes the genetic information of almost all living organisms Its molecular

structure and their intramolecular interactions are particularly suitable to maximize stability against oxidative stress and UV light absorption. Yet the protection and repair strategies are still error prone. DNA lesions are produced including the most complex and highly mutagenic ones. An important threat to DNA stability comes from photosensitization, i.e. from the dramatic multiplication of radiation induced defects mediated by the presence of organic or organometallic dyes compared to the direct exposure to UVA radiation. Moreover the photo induced production of singlet oxygen generates an extremely high oxidative stress on DNA that in vivo normally results in extended cellular apoptosis. Elucidating the processes leading to DNA damages from the production of a simple radical entity to deleterious lesions as well as the opportunities of repair by devoted enzymes is a cornerstone towards the development of more efficient protection strategies. Sensitization and selective production of DNA lesions can also be exploited to induce the selective apoptosis of cancer cells upon exposition to radiation or to oxidative stress for instance in the field of photodynamic therapy. The importance and relevance of the field is witnessed by the impressive amount of high level papers dealing with this complex subject and notably tackling the structural elucidation of DNA and DNA drug adducts, the mechanisms of formation of DNA lesions including the precise detection of the final lesion products as well as the influence of the lesions on the DNA stability and dynamics and the consequences on the ease of repair. Due to the complexity of the field lying at the frontiers between chemistry, physics and biology, multidisciplinary strategies allying modeling and experience are needed. This topic aims at giving an extended overview of the current research in the domain with fundamental contribution from the leading groups in the field of DNA reactivity, structural characterization, photo chemistry and photo physics as well as repair mechanism. It will therefore be a fundamental guide for scientists wanting to address the field of DNA lesion and repair but also more generally for researchers working in rational drug design or in the development of biomarkers and medical imaging techniques.

Liquid Biopsies in Solid Tumors Massimo Cristofanilli, 2017-03-25. This volume with chapters written by experts in the field of cancerous tumors details the key factors associated with liquid biopsies in solid tumors: blood based diagnostics, circulating tumor cells enumeration and molecular analysis, association with breast cancer, epithelial-mesenchymal transition, detection and monitoring, circulating free tumor DNA, CTCs and ctDNA and the exosome. The field of blood based diagnostics is rapidly evolving, demonstrating the possibility of real time molecular analysis of cancer cells and their phenotype and genotype. Circulating Tumor Cell CTCs have demonstrated prognostic and predictive value in advanced cancer and represents a source of tumor cells for transcriptome and genomic analysis. Most recently the detection of genomic abnormalities in the peripheral blood by sensitive and selective PCR methods, liquid biopsy opened to the option of a comprehensive blood based tumor analysis. Similar information can be obtained by analysis of exosome, a natural packaging and messaging system being explored in advanced malignancies. The final frontier is the evaluation of immune cells determinant of innate and adaptive immunity.

The Indo-Europeans Rediscovered J. P. Mallory, 2025-06-19. Today the number of native speakers of Indo

European languages across the world is reckoned to be over 2.6 billion or about 45% of the earth's population. Yet the idea that an ancient prehistoric population in one time and place gave rise to our own family of people and language is one with a long and troubled past. In this expansive investigation based on over 50 years of research, J. P. Mallory navigates the complex history of our search for the Indo-European homeland, offering fresh insight into the debates surrounding their origin as well as the latest genetic research. In this compelling account, Mallory explores ancient migrations, linguistics, and archaeology, applying cutting-edge genetic research to untangle the key arguments with wit and verve. He addresses how the controversial idea of a single shared homeland has been viewed by scientists, archaeologists, and linguists across the past century and reconsiders how, in the case of the Nazis and more recent nationalist movements, they have been manipulated for political advantage. He goes on to unpick the linguistic trail linking us to the Indo-Europeans, looking at Sanskrit, Greek, Latin, and more, tracing our linguistic origins across multiple peoples and cultures, finally bringing the most up-to-date phylogenetic research to bear on the story. Ultimately, this book offers the most conclusive answer to the controversial question of where we are from and how we got here.
