by Wilson Rawls (Excerpt)

A "Mr. Kyle and I were told to go to one end of the table. "Our dogs were placed at the other end. "Mr. Kyle snapped his fingers and called to his dog.

B "The big hound started walking toward his master. "What a beautiful sight it was. "His walked like a king. "His body was stiff and straight, his head high in the air, his large muscles quivered and jerked under his glossy coat, but something went wrong. "Just before he reached the end, he broke his stride, turned, and jumped down from the table.

C "A low murmur ran through the crowd.

D "It was my turn. "Three times I tried to call to Little Ann. "Words just wouldn't come out. "My throat was too dry. "The vocal cords refused to work, but I could snap my fingers. "That was all I needed. "She started toward me. "I held my breath. "There was silence all around me.

E "As graceful as any queen, with her head high in the air, and her long red tail arched in a perfect rainbow, my little dog walked down the table. "With her warm gray eyes staring straight at me, on she came. "Walking up to me, she laid her head on my shoulder. "As I put my arms around her, the crowd exploded.

F "During the commotion I felt hands slapping me on the back, and heard the word congratulations time after time. "The head judge came over and made a speech. "Handing me a small silver cup, he said, "Congratulations, son. "It was just won."

The Process of Question

Answering Wendy G. Lehnert, 2022-11-01 Originally published in 1978 The Process of Question Answering examines a phenomenon that relies on many realms of human cognition language comprehension memory retrieval and language generation Problems in computational question answering assume a new perspective when question answering is viewed as a problem in natural language processing A theory of human question answering must necessarily entail a theory of human memory organization and theories of the cognitive processes that access and manipulate information in memory This book describes question answering as a particular task in information processing The theoretical models described here have been built on a formulation of general theories in natural language processing theories about language that were developed without the specific problem of question answering in mind By requiring programmers to be concerned with the precise form of information in memory and the precise operations manipulating that information they can uncover significant problems that would otherwise be overlooked An early insight into artificial intelligence today this reissue can be enjoyed in its historical context *Philippine Journal of Education* ,1933
