Frazee,2018 The relationship between spatial reasoning and success in mathematics has been well established However the ways in which spatial reasoning is used in mathematics learning is not clearly understood Many current studies investigating spatial reasoning in mathematics quantitatively correlate aspects of students mathematical proficiency with standardized measures of spatial reasoning To extend the research that connects spatial ability and the learning of mathematics there is a need for studies that elaborate the ways in which students use spatial reasoning while learning specific mathematics content The present study examines the relationship between spatial reasoning and geometric reasoning in the context of 2D isometries specifically reflections and rotations Rotations and reflections are often included in spatial reasoning assessments Moreover isometries are important formal mathematical concepts which have properties specific parameters and lend themselves to analytic reasoning Thus isometries are a foundational topic for studying the link between spatial reasoning and the learning of mathematics      Senior Geometry Arthur William Young,Charles Watson David Radcliffe,1960      **Circular Reasoning** Bryan Bain,2008      Senior Geometry Arthur William Young,Charles Watson David Radcliffe,1953      **Geometry and Trigonometry Answers** M.
