Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 12 sedentary women, 30 to 45 years of age, who were randomly selected from a telephone directory. The subjects were divided into two groups: a control group and an exercise group. The control group consisted of six women who did not exercise, and the exercise group consisted of six women who exercised for 12 weeks. The exercise group was divided into two subgroups: a low-intensity group and a high-intensity group. The low-intensity group exercised at 50% of their maximum HR, and the high-intensity group exercised at 70% of their maximum HR. The subjects were monitored for 12 weeks, and their HR and EE were measured at the beginning and end of the study. The results showed that the exercise group had a significant increase in HR and EE compared to the control group. The high-intensity group had a significantly greater increase in HR and EE than the low-intensity group. The results suggest that a 12-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

23. When configuring a multi-mount AFS, set `mountmnt` to your Netatun path: `mountmnt=/usr/bin/netatun`
24. If you're using the `afs` multi-mount method, add `afs` to the `mountmnt` path. For example, if you're using the `afs` multi-mount method, set `mountmnt` to `/usr/bin/netatun-afs`. This is required after the purchase of this type of multi-mount AFS, as pointing out the group appears in `group 1`.
25. Do not include the `afs` of `mountmnt` in `afs` dependencies.
26. When configuring the `afs` multi-mount, do not change the `afs` to `afs` in the `afs` path. For example, `afs`.

When you install your T-Value One Connection, improper installation of all four screws (52 connections for One Connection®) will affect the overall health, safety and life of the system. Proper ventilation is critical to maintain proper ventilation. Failure to maintain proper ventilation may result in a variety of problems with the product.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. For example, if the price of the output rises, the producer will increase its output level. This is because the producer's marginal revenue curve shifts up, and the producer will increase its output level until marginal revenue equals marginal cost.
