Mathis,Bruce R. Huber,2018-04-19 This book offers an edited volume for all readers who wish to gain an in depth grasp of the economic analysis of recent developments in energy law and policy in Europe and the United States In response to waning resources and heightened environmental awareness many countries are now seeking to redefine their energy mix Several energy sources are available coal and oil natural gas and a variety of renewables Yet which of them are capable of addressing core energy related concerns Reliability security affordability fairness and sustainability all have to be taken into account Further once a target mix has been identified two challenges remain for legal scholars what role does the law play in achieving a specified energy mix and how can the law best fulfill that role The essential energy concerns are just as important in defining the way we shape our energy mix as they are in defining the mix itself An example of current challenges in energy law and policy can be seen in the pursuit by the German and Swiss governments of the so called Energiewende energy transition These policies are intended to enable the transition from a non sustainable use of fossil and nuclear energy to a more sustainable approach based on renewable energies On the one hand the goal is to achieve a decarbonization of the energy economy by reducing the use of fossil energy sources such as petroleum carbon and natural gas On the other and in response to the Fukushima nuclear accident a phase out is intended to eliminate the dangers of nuclear technologies Achieving these goals poses tremendous challenges for the two countries energy policies partly because

the energy transition will not only affect energy production but also energy consumption From a Law and Economics perspective a number of questions arise to what extent is it justifiable to rely on markets and continued technological innovation especially with regard to the present exploitation of scarce resources To what extent is it necessary for states to intervene in energy markets Regulatory instruments are available to create and maintain more sustainable societies command and control regulations restraints Pigovian taxes emission certificates nudging policies and more If regulation in a certain legal field is necessary which policies and methods will most effectively spur the sustainable consumption and production of energy in order to protect the environment while mitigating any potential negative impacts on economic development Do neoclassical and behavioural economics provide us with a suitable framework for predicting the market s complex reactions to a changing energy policy This book provides theoretical insights as well as empirical findings in order to answer these vital questions

Coalition Politics and Economic Development Irfan Nooruddin, 2010-12-02 Coalition Politics and Economic Development challenges the conventional wisdom that coalition government hinders necessary policy reform in developing countries Irfan Nooruddin presents a fresh theory that institutionalized gridlock by reducing policy volatility and stabilizing investor expectations is actually good for economic growth Successful national economic performance he argues is the consequence of having the right configuration of national political institutions Countries in which leaders must compromise to form policy are better able to commit credibly to investors and therefore enjoy higher and more stable rates of economic development Quantitative analysis of business surveys and national economic data together with historical case studies of five countries provide evidence for these claims This is an original analysis of the relationship between political institutions and national economic performance in the developing world and will appeal to scholars and advanced students of political economy economic development and comparative politics
