Thallium-201 and Technetium-99m-Pyrophosphate Myocardial Imaging in the Coronary Care Unit F.J.T Wackers, 2012-12-06 Noninvasive visualization of myocardial infarction using radionuclides dates back over eighteen years Edward A Carr and William H Beierwaltes were first to report 1962 successful external imaging of myocardial infarcts in dogs and in man using an Anger scintillation camera They demonstrated that after intravenous administration of ^{86}Rb or ^{131}I an infarct was visualized as a cold spot while ^{203}Hg labeled chlormeridin resulted in a hot spot image of the infarct Since then there have been major developmental improvements in available radionuclides scintillation cameras and computer processing capabilities In particular the development of mobile gamma cameras opened the possibility to obtain high quality images even at the bedside of critically ill patients Since the development in 1974 of a new radiopharmaceutical ^{201}Tl and the application of $^{99\text{m}}\text{Tc}$ pyrophosphate for myocardial imaging these imaging agents are widely used for the detection of acute myocardial infarction However for practical application frequently there appears to be uncertainty or even confusion concerning the relative merits of each method

A Tale of Seven Elements Eric R. Scerri, 2025 In 1913 English physicist Henry Moseley transformed our understanding of the elements by organizing them by atomic number from hydrogen to uranium However it soon became obvious that researchers had yet to discover seven completely unknown elements In this updated and extended edition of his acclaimed book Eric Scerri presents the intriguing stories of these elements protactinium hafnium rhenium technetium francium astatine and promethium It follows their discoveries through the two world wars starting with protactinium in 1917 and ending with promethium in 1945 Scerri details the research leading to each discovery the pivotal experiments the chemists involved the properties of each element and their applications For example hafnium alloys named after Copenhagen hafnia have some of the highest boiling points and are used in rocket thrusters like those on the Apollo Lunar Modules Scerri then examines the integration of twenty five new elements into the periodic table over the past fifty years and concludes with a new chapter on rare Earth elements and the histories of their discoveries The Second Edition of *A Tale of Seven Elements* vividly portrays the journey of chemical research from missteps and disputes to the thrill of discovery illuminating the researchers behind the elements as much as their breakthroughs
