#### Model: Color Variations in Moths in Great Britain

##### Read This!

Populations of most living organisms exhibit genetic diversity among individuals. Certain traits in the population give some organisms a greater chance of survival than individuals that lack these traits. Because these traits tend to increase the chance of survival, these individuals may produce more offspring that will also have the trait that favors survival. Over time, the number of individuals within the population possessing the favorable trait increases while the number of offspring with the unfavorable trait decreases.

#### Model 2 – Color Variations in Moths in Great Britain

Refer to the graph of Peppered Moth Frequency in Model 2. Which moth color was more prevalent (Common) before 1850?

The most common moth before 1850 was the light moths.
