Lesson Summary

Chemical Reactions

KEY QUESTION What happens to chemical bonds during chemical reactions?

A **chemical reaction** is a process that changes, or transforms, one set of compounds into another. An important scientific principle is that mass and energy are conserved during chemical transformations. This is also true for chemical reactions that occur in living organisms. Some chemical reactions occur slowly, such as the combination of iron and oxygen to form an iron oxide called rust. Other reactions occur quickly. The elements or compounds that engage in a chemical reaction are known as **reactants**. The elements or compounds produced by a chemical reaction are known as **products**. Chemical reactions involve changes in the chemical bonds that join atoms in compounds.
