A Biologist's Guide to Mathematical Modeling in Ecology and Evolution Sarah P. Otto, Troy Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available

The Self in the Family Luciano L'Abate, 1997-01-07 In his acclaimed book *A Theory of Personality Development* Luciano L'Abate introduced a revolutionary theory of personality development and functioning that departed radically from traditional theories In place of hypothetical traits existing in an empirical vacuum Dr L'Abate offered an image of observable interpersonal competencies functioning within the basic contexts of home work leisure and the marketplace Central to his theory was a developmental model that posited the family as the primordial setting in which propensities are formed and behavior patterns set By defining personality in terms of the growth and interplay of interpersonal competencies the L'Abate theory provided an epistemologically and empirically sound basis for understanding personality function and dysfunction as corollaries and extensions of one another In *The Self in the Family* Luciano L'Abate and Margaret Baggett again break new ground by expanding the L'Abate theory of personality development to encompass criminal and psychopathological behavior Drawing upon mounting empirical evidence that the family paradigm is the major determinant of personality socialization throughout the life span the authors develop a selfhood model with demonstrable links between the three domains of personality function criminality and psychopathology With the help of the model they show how it is now possible to arrive at a personality based interpretation of most deviant behaviors including criminality psychopathology addictions and even psychosomatic illnesses and they describe various preventive and psychotherapeutic applications for this expanded theory of family based personality development The authors further elaborate on the theories developed in Dr L'Abate's previous books by introducing the core concepts of hurt the basic feeling underlying much of personality functioning and dysfunctioning and a continuum of likeness the fundamental determinant of interpersonal choices and behavior in friendships parent child relations and marital relations Offering an empirically rigorous developmentally based unified field theory of personality function criminality and psychopathology *The Self in the Family* is essential reading for developmental and clinical psychologists family therapists personality theorists and criminality and psychopathology researchers

Barker,Jawahar Rawtani,2004-11-18 Historically batch control systems were designed individually to match a specific arrangement of plant equipment They lacked the ability to convert to new products without having to modify the control systems and did not lend themselves to integration with manufacturing management systems Practical Batch Management Systems explains how to utilize the building blocks and arrange the structures of modern batch management systems to produce flexible schemes suitable for automated batch management with the capability to be reconfigured to use the same plant equipment in different combinations It introduces current best practice in the automation of batch processes including the drive for integration with MES Manufacturing Execution System and ERP Enterprise Resource Planning products from major IT vendors References and examples are drawn from DCS PLC batch control products currently on the market

Implement modern batch management systems that are flexible and easily reconfigured Integrate batch management with other manufacturing systems including MES and ERP Increase productivity through industry best practice **Number**
