Ramsey, Cyril Jerome Galvin, 1977 The size of sand on Atlantic coast beaches of southern New Jersey was studied by analyzing 788 sand samples In north to south order the samples were collected by Island Beach Long Beach Island Brigantine Atlantic City and Ludlam Island Sand size generally decreased from north to south with size at the two northermost sites noticeably coarser on the average than the size at the three southern sites Results from Long Beach Island Atlantic City and Ludlam Island where most of the data were collected indicate that size averaged by beach decreases from 0.33 millimeter at Long Beach Island in the north through 0.27 millimeter at Atlantic City to 0.23 millimeter at Ludlam Island in the south Size averaged by profile line varies from 0.34 millimeter at a profile on the northern half of Long Beach Island 0.20 millimeter at a profile in the middle of Ludlam Island Size also varies with position across the profile from low tide terrace to landward edge of berm tending to decrease landward

across the average of three profiles on Atlantic City and three profiles on Ludlam Island but tending to increase landward across the average of four profile lines on Long Beach Island Maximum variation at one Beach averaged by position on profile occurs at Long Beach Island where the average size increased from 0.28 millimeter on the low tide terrace to 0.36 millimeter on the berm Size variation by month suggests a tendency for sand to be finer during late summer and early fall but data do not permit identification of a consistent annual cycle

Marketplace Trade and West African Urban Development Krys Ochia, 2022-01-01 This book analyses how informal economy traders and the marketplace institution dominate the local economy in African cities According to the World Bank being an African reduces the probability that an individual is an entrepreneur in the manufacturing sector by more than 95 percent Exporting unprocessed strategic raw materials and importing large volumes of finished goods stagnate Africa's informal sector while creating formal jobs overseas This suggests employment increases in distributive trade and persistence of the marketplace institution in reducing urban unemployment and income inequality However there is limited knowledge of the men and women with permanent stalls in large urban marketplaces that function daily as a temporary city

within a city even though they are the major actors in distribute trade More important their daily out of stall contacts resulting from maintaining complex social and economic relationships that determine the financial health of family business and the economy are generally unexplored and largely unknown but have significant unintended consequences on the urban mobility system Researchers planners development practitioners and policymakers have therefore not focused their attention and considered the impacts of the powerful economic institution marketplaces and traders in framing transport planning processes and urban development policies and that is the paradox surrounding marketplace trade and urban development in West Africa
