Human Associative Memory John R. Anderson, G. H. Bower, 2014-02-25 First published in 1973 This book proposes and tests a theory about human memory about how a person encodes retains and retrieves information from memory The book is especially concerned with memory for sentential materials We propose a theoretical framework which is adequate for describing comprehension of linguistic materials for exhibiting the internal representation of propositional materials for characterizing the interpretative processes which encode this information into memory and make use of it for remembering for answering questions recognizing instances of known categories drawing inferences and making deductions

Utopia Is Creepy Nicholas Carr, 2016-09-06 A freewheeling sharp shooting indictment of a tech besotted culture With razor wit Nicholas Carr cuts through Silicon Valley's unsettlingly cheery vision of the technological future to ask a hard question Have we been seduced by a lie Gathering a decade's worth of posts from his blog Rough Type as well as his seminal essays Utopia Is Creepy is Carr's best hits for those who missed the last decade of his stream of thoughtful commentary about our love affair with technology and its effect on our relationships Richard Cytowic New York Journal of Books Carr draws on artists ranging from Walt Whitman to the Clash while weaving in the latest findings from science and sociology Carr's favorite targets are those zealots who believe so fervently in computers and data that they abandon common sense Cheap digital tools do not make us all the next Fellini or Dylan Social networks diverting as they may be are not vehicles for self enlightenment And likes and retweets are not going to elevate political discourse Utopia Is Creepy compels us to question the technological momentum that has trapped us in its flow Resistance is

never futile argues Carr and this book delivers the proof

Human Information Processing Barry H. Kantowitz, 2021-10-14 Originally published in 1974 this volume presents seven detailed views of human information processing at the time While no single volume can do justice to the breadth of the area it was hoped that the present selections reflected both the content and methodological approaches currently used by experimental psychologists concerned with the issues and problems of human information processing The organization of the book is simple proceeding from the human performance end of the continuum an overview of which is given in the first chapter Successive chapters are progressively more concerned with human cognition and the last chapter gives an overview of human cognition The intervening chapters are devoted to more specific topics and yield a detailed portrait of the models findings and methodology of human information processing

Cognition across the psychiatric disorder spectrum: From mental health to clinical diagnosis Caroline Gurvich, Susan L. Rossell, 2015-08-31 Psychiatric symptoms are considered to be distributed along a continuum from good mental health to a diagnosable psychiatric disorder In the case of psychosis subclinical psychotic experiences which can include odd behaviors strange speech unusual perceptual experiences and social emotional withdrawal are often referred to as schizotypy Research examining schizotypal traits in non clinical populations is rapidly expanding The exploration of schizotypy allows us to identify areas of overlap with psychiatric disorders schizophrenia and related disorders at genetic biological environmental and psychosocial levels thus identifying putative risk factors as well as exploring potentially protective factors Schizotypy is also a valuable model for exploring cognition as performance is not confounded by issues often present in schizophrenia samples such as long term antipsychotic medication usage social isolation and recurrent hospitalizations Investigating cognition is a particularly important area of research as cognitive symptoms in schizophrenia such as impaired attention reduced memory and difficulties with executive

functions are a core feature of schizophrenia and strongly related to quality of life and functional outcomes yet generally respond poorly to current treatment options The aim of this special Research Topic is to explore the relationship between cognition schizotypy and the schizophrenia spectrum The articles in this e book draw on a variety of perspectives and represent an interesting array of opinions reviews and empirical studies that begin to answer questions about the similarities and overlaps between schizotypy and schizophrenia spectrum disorders contributing to our understanding of potential risk factors Equally important is research that highlights differences between schizotypy and schizophrenia spectrum disorders that may enhance our understanding of potentially protective or adaptive features of schizotypy Collectively these articles highlight the exploratory potential of the study of schizotypy particularly in relation to better understanding cognition across the schizophrenia spectrum

The Nature of Mathematical Thinking Robert J. Sternberg, Talia Ben-Zeev, 2012-10-12 Why do some children seem to learn mathematics easily and others slave away at it learning it only with great effort and apparent pain Why are some people good at algebra but terrible at geometry How can people who successfully run a business as adults have been failures at math in school How come some professional mathematicians suffer terribly when trying to balance a checkbook And why do school children in the United States perform so dismally in international comparisons These are the kinds of real questions the editors set out to answer or at least address in editing this book on mathematical thinking Their goal was to seek a diversity of contributors representing multiple viewpoints whose expertise might converge on the answers to these and other pressing and interesting questions regarding this subject The chapter authors were asked to focus on their own approach to mathematical thinking but also to address a common core of issues such as the nature of mathematical thinking how it is similar to and different from other kinds of thinking what makes some people or some groups better than others in this subject area and how mathematical thinking can be assessed and taught Their work is directed to a diverse audience psychologists interested in the nature of mathematical thinking and abilities computer scientists who want to simulate mathematical thinking educators involved in teaching and testing mathematical thinking philosophers who need to understand the qualitative aspects of logical thinking anthropologists and others interested in how and why mathematical thinking seems to differ in quality across cultures and laypeople and others who have to think mathematically and want to understand how they are going to accomplish that feat
