

Let's apply this to a real-world mapping situation.

The school is located at (2,3) and your home is located at (5,8). How many units is the distance between your school and your house?

First start at the point (2,3) and then count the units up to your home. There are 5 units. Then move right and count the units. There are 3 units. Add the units together to get the total distance from the school to your house. There are $5 + 3$ or 8 units.

Let's look at how this can be used algebraically in a different example.

You get paid \$2 each time you take out the garbage.

The point (1,2) represents taking the garbage out 1 time and earning a total of \$2.

The point (3,6) represents taking the garbage out 3 times and earning a total of \$6.

What does the 5 in the point (5,10) represent? That's right! Taking the garbage out 5 times.

What does the 10 in the point (5,10) represent? That's right! Earning a total of \$10.

Neuroscientists tell us that the brain organizes information in networks and maps. What better way to teach students to express their ideas than with the same method used by the brain? *Student Successes With Thinking Maps* presents eight powerful visual models that boost all learners' metacognitive and critical thinking skills. Enriched with new research, a wealth of examples, and cross-content applications, the book also shows how Thinking Maps serve as valuable assessment tools. This novel and effective model helps students:

- Organize thoughts
- Examine relationships
- Enhance reasoning skills
- Create connections between subjects
- Engage with content

The visual nature of Thinking Maps helps level the playing field and is ideal for inclusive settings. Additionally, educators have found that using Thinking Maps for professional development can improve teacher performance, build leadership skills, and raise students' scores on high-stakes tests. If your goal is to transform your school's culture, Thinking Maps will put you on the road to success.
