*CAD of Circuits and Integrated Systems* Ali Mahdoui, 2020-07-16 This book addresses the difficulty of obtaining a quality solution that is pre optimal or even optimal in a reasonable time from a central processing

unit CPU As polynomial problems can be treated by exact methods the problem posed concerns non polynomial problems for which it is necessary to develop efficient algorithms based on heuristics or meta heuristics Chapter 3 of this book demonstrates how to develop such algorithms which are characterized by an initialization of argued solutions sometimes the global optimum can be obtained from such an initialization a non random generation of solutions to avoid generating the same solution several times or even generating solutions that cannot be achieved avoidance of being trapped by a local optimum good use of CPU time by reducing the size of the space of solutions to be explored which is often very large for such problems without compromising the quality of the solution plus a reasoned displacement from one solution to another to improve the quality of the solution as the processing is carried out These aspects are applied to concrete applications in the design of integrated circuits and systems at various levels To do this and to help the reader better understand this problem Chapters 1 and 2 present basic notions on computational complexity and the design of integrated circuits and systems
