Insurance in European VAT Marta Papis-Almansa,2016-11-30 Insurance constitutes a significant part of the financial services sector and is one of the foundations of modern economy and society In the design of tax laws however whether and how to tax insurance is a complex issue that has become particularly controversial in the area of value added tax VAT In the European Union as in most of the world insurance is exempt from VAT but New Zealand and Australia do not follow this practice Given that New Zealand's simple comprehensive goods and services tax GST called the world's purest value added tax and its modified Australian version do not appear to suffer from the shortcomings in efficiency and effectiveness that plague European VAT a comparison of the two systems is in order This book is not only the first comparative in depth study of the treatment of insurance in the two systems but also the first comprehensive legal research devoted to the treatment of insurance in EU VAT published in English Among the underlying issues and topics treated by the two systems covered are the following who has a right to deduct input VAT in relation to supplies inherent in insurance arrangements and to what extent what constitutes a supply of insurance and consideration for such a supply what transactions fall within the scope of the VAT Directive's exemption for insurance and drawing a line between insurance and saving The analysis is grounded in a methodology in which concepts of European VAT are compared with concepts performing the same function in the Australian and New Zealand GST laws The author concludes with proposals for reform in EU VAT in the light of experience in these two major non EU countries Given that it has been proven that exemptions from VAT such as insurance cause a significant number of economic distortions and inefficiencies this study represents a major contribution to a topical debate in European VAT law It will be welcomed by taxation authorities interested policymakers practitioners and scholars not only in Europe but worldwide

Fiscal Monitor, April 2013 International Monetary Fund. Fiscal Affairs Dept.,2013-04-16 Continued progress in reducing advanced economy deficits and a gradually improving external environment have lowered short term fiscal risks according to this issue but global prospects nevertheless remain subdued and many advanced economies face a lengthy difficult and uncertain path to fiscal sustainability Though many advanced economies are now close to achieving primary surpluses that will allow them to stabilize their debt ratios this is only a first step as merely stabilizing advanced economy debt at current levels would be

detrimental to medium and longer term economic prospects The key elements of the required policy package are well known foremost among them is setting out and implementing a clear and credible plan to bring debt ratios down over the medium term Debt dynamics have remained relatively positive in most emerging market economies and low income countries and most plan to continue to allow the automatic stabilizers to operate fully while pausing the underlying fiscal adjustment process Those with low general government debt and deficits can afford to maintain a neutral stance in response to a weaker global outlook But countries with relatively high or quickly increasing debt levels are exposed to sizable risks especially once effective interest rates rise as monetary policy normalizes in the advanced economies and concessional financing from advanced economies declines The widespread use of energy subsidies makes commodity prices an additional source of vulnerability in many emerging market and low income economies subsidy reform higher consumption taxes and broadening of tax bases would help support consolidation efforts
