Intelligent Transportation Related Complex Systems and Sensors Kyandoghere Kyamakya, Jean Chamberlain Chedjou, Fadi Al-Machot, Ahmad Haj Mosa, Antoine Bagula, 2021-09-01 Building around innovative services related to different modes of transport and traffic management intelligent transport systems ITS are being widely adopted worldwide to improve the efficiency and safety of the transportation system They enable users to be better informed and make safer more coordinated and smarter decisions on the use of transport networks Current ITSs are complex systems made up of several components

sub systems characterized by time dependent interactions among themselves Some examples of these transportation related complex systems include road traffic sensors autonomous automated cars smart cities smart sensors virtual sensors traffic control systems smart roads logistics systems smart mobility systems and many others that are emerging from niche areas The efficient operation of these complex systems requires i efficient solutions to the issues of sensors actuators used to capture and control the physical parameters of these systems as well as the quality of data collected from these systems ii tackling complexities using simulations and analytical modelling techniques and iii applying optimization techniques to improve the performance of these systems **Australian national bibliography** ,1961
