CAD Data Transfer for Solid Models E.G. Schlechtendahl, 2013-11-11 Principal authors U Kroszynski B Palstr9Sm 1 1 The evolution of concepts and specifications for CAD data exchange The CAD CAM community has witnessed during the last decade the appearance of several specifications as well as proposals for standards which either attempt to cover wider areas or to be more reliable and stable than the others With the rapid evolution of both hardware and software the capabilities offered by CAD systems and CAD based application systems are far more advanced than they were only ten years ago even when they are now based on micro computers or personal computers The situation with standards however is not and cannot be so In order to be reliable and accepted by a wide community of both vendors and users a standard has to be stable This implies a life span of at least a decade This also implies that the standard has to be general and flexible enough to accommodate present as well as expected future developments 1 1 IGES The initial development of concepts for CAD data exchange is strongly influenced by the US Integrated Computer Aided Manufacturing ICAM programme that dealt with the development of methods for data exchange In September 1979 a subgroup was established with participation of the National Bureau of Standards the General Electric Company and the Boeing Company The result of this effort was the Initial Graphics Exchange Specification IGES that was published as a NBS report 61 in 1980

A. Keady, 2013-03-25 How to use industry standards to create complete, consistent and accurate equipment inventories. The National Institute of Science and Technology estimates that the loss of information between the construction of buildings and their operation and maintenance costs facility owners 15.8 billion every year. This phenomenal loss is caused by inconsistent standards for capturing information about facilities and their equipment. In *Equipment Inventories for Owners and Facility Managers*, Robert Keady draws on his twenty years of experience in facility management and his intimate knowledge of CSI classification systems and standards to tackle this problem head on. Using standards already in use in the AEC industry, he provides the road map for capturing everything owners and facility managers need to know to operate and maintain any facility. This comprehensive step by step guide explains the different types of equipment inventories and why they are important. It identifies and describes the types of information that should be captured in an equipment inventory. It describes and compares the different industry standards: CSI OmniClass and UniFormat COBie and SPIe that can be used for equipment inventories. It provides best practices for identifying and tagging equipment. It walks through the equipment inventory process with real world examples and best practices. It provides the tools for conducting the equipment inventory tables of all the possible information and data that need to be collected and fifty maps of workflows that can be used to capture that data immediately **Aerospace Engineering**, 1999 **Modeling Manufacturing Systems** Paolo Brandimarte, Agostino Villa, 2013-03-09 Advanced modeling techniques are a necessary tool in order to design and manage manufacturing systems effectively.
