Helgeson,2020-02-21 Noted for its fair and equal coverage of men and women *Psychology of Gender* reviews the research and issues surrounding gender from multiple perspectives including psychology sociology anthropology and public health Going far beyond discussions of biological sex and gender identity the text explores the roles that society has assigned to females and males and the other variables that co occur with sex such as status and gender related traits The implications of social roles status and gender related traits for relationships and health are also examined The text begins with a discussion of the nature of gender and development of gender roles before reviewing communication and interaction styles and how they impact our friendships and romantic relationships It concludes with an exploration of how gender influences both physical and mental health New to the 6th Edition Emphasis on the intersectionality of gender considering it as a part of wider social categories such as race ethnicity social class and gender identity Recognition of the increasingly prevalent view that gender is nonbinary Extended coverage of LGBTQ individuals their relationships and their health Expanded discussions of key issues including gender role strain gender fluidity women and STEM parenthood balancing family and work demands online communication and sexual harassment Accompanied by a comprehensive companion website featuring resources for students and instructors alongside extensive student learning features throughout the book *Psychology of Gender* is an essential read for all students of gender from psychology women s studies gender studies sociology and anthropology      The Principal as Instructional Leader Sally J. Zepeda,2013 First Published in 2013 Routledge is an imprint of Taylor Francis an informa company      *Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives* Sarit Ashkenazi,Orly Rubinsten,Bert De Smedt,2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to

shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
