This book consists of selected papers written by the founder of fuzzy set theory Lotfi A Zadeh Since Zadeh is not only the founder of this field but has also been the principal contributor to its development over the last 30 years the papers contain virtually all the major ideas in fuzzy set theory fuzzy logic and fuzzy systems in their historical context Many of the ideas presented in the papers are still open to further development The book is thus an important resource for anyone interested in the areas of fuzzy set theory fuzzy logic and fuzzy systems as well as their applications Moreover the book is also intended to play a useful role in higher education as a rich source of supplementary reading in relevant courses and seminars The book contains a bibliography of all papers published by Zadeh in the period 1949 1995 It also contains an introduction that traces the development of Zadeh s ideas pertaining to fuzzy sets fuzzy logic and fuzzy systems via his papers The ideas range from his 1965 seminal idea of the concept of a fuzzy set to ideas reflecting his current interest in computing with words a computing in which linguistic expressions are used in place of numbers Places in the papers where each idea is presented can easily be found by the reader via the Subject Index

**Logic Programming and Databases** Stefano Ceri, Georg Gottlob, Letizia Tanca, 2012-12-06 The topic of logic programming and databases has gained in creasing interest in recent years Several events have marked the rapid evolution of this field the selection by the Japanese Fifth Generation Project of Prolog and of the relational data model as the basis for the development of new machine archi tectures the focusing of research in database theory on logic queries and on recursive query processing and the pragmatic application oriented development of expert database systems and of knowledge base systems As a result an enormous amount of work has been produced in the recent literature coupled with the spontaneous growth of several advanced projects in this area The goal of this book is to present a systematic overview of a rapidly evolving discipline which is presently not described with the same approach in other books We intend to introduce stu dents and researchers to this new discipline thus we use a plain tutorial style and complement the description of algorithms with examples and exercises We attempt to achieve a balance be tween theoretical foundations and technological issues thus we present a careful introduction to the new language Datalog but we also focus on the efficient interfacing of logic programming formalisms such as Prolog and Datalog with large databases
