

Nice answers! In addition to your answers, triangle has a prefix "tri" which means "3". Let's proceed with the next polygon. (While pointing at the quadrilateral, the teacher will ask the students.) What polygon is this? What can you tell me about it?

Continue by explaining that "quad means four". Then, write quad means four below the quadrilateral.

Let's proceed with the next polygon. (While pointing at the pentagon, the teacher will ask the students.) What polygon is this? What can you tell me about it?

What is the prefix of pentagon? What does "pent" means?

Continue for hexagon, heptagon, octagon, nonagon, and decagon. (Students should be able to identify the number of sides and possibly angles for each polygon.)

That's good class. I know that you'll find it easy to name or identify the different types of polygons. Now, can somebody give me the answer? What do you call to a polygon having equal sides and equal angles?

D. Analysis

You got it! Now, let's have a short activity before you take the quiz.

Using a ruler, draw the following regular polygons inside each box.

1. A regular polygon with 3 sides

(Write these properties below the shape on the board.)

(The students will continue to identify the number of sides and angle for each polygon. They will also be thinking ahead and already have the prefix for hexagon, heptagon, octagon, nonagon, and decagon.)

Regular Polygons

1. A regular polygon with 3 sides

2. A regular polygon with 4 sides

3. A regular polygon with 6 sides
