Doing Probation Work Rob Mawby, Anne Worrall, 2013-03-05 A great deal has been written about the political policy and practice changes that have shaped probation work but little has been written on the changes to occupational cultures and the ways in which probation workers themselves view their role This book fills that gap by exploring the meaning of doing probation work from the perspective of probation workers themselves Based on 60

extensive interviews with probation workers who joined the probation service from the 1960s to the present day this book reaches beyond criminological and policy analysis to an application of sociological and organizational theory to rich qualitative data It explores the backgrounds and motivations of probation workers their changing relationships with other criminal justice agencies and the complex public perceptions and media representations of probation work The book considers the relative influences of religion the union diversity and feminization and while it acknowledges that probation work is stressful it draws innovatively on sociological and organizational concepts to categorize how workers respond to turbulent times This book challenges the dominant narrative of probation s decline in recent literature and constructs three ideal types of probation worker lifers second careerists and offender managers Each makes an essential contribution to probation cultures which collectively contribute to rather than undermine the effectiveness of offender management and the future of probation work This book will be important reading for researchers in the disciplines of criminology criminal justice sociology and management as well as probation workers of all grades and those in training

Software Composition Thomas Gschwind,Uwe Assmann,Oscar Nierstrasz,2005-09-05 Component based software development is the next step after object oriented programmingthatpromisesto reducecomplexityandimprovereusability These advantages have also been identified by the industry and consequently over the past years a large number of component based techniques and processes have been adopted in many of these organizations A visible result of this is the number ofcomponentmodels thathavebeendevelopedandstandardized These models define how individual software components interact with each other and simplify the design process of software systems by allowing developers to choose from previously existing components

The development of component models is a first step in the right direction but there are many challenges that cannot be solved by the development of a new component model alone. Such challenges are the adaptation of components and their development and verification. Software Composition is the premiere workshop to advance the research in component based software engineering and its related fields. SC 2005 was the fourth workshop in this series. As in previous years, SC 2005 was organized as an event co-located with the ETAPS conference. This year's program consisted of a keynote on the revival of dynamic languages given by Prof. Oscar Nierstrasz and 13 technical paper presentations (9 full and 4 short papers). The technical papers were carefully selected from a total of 41 submitted papers. Each paper was thoroughly peer reviewed by at least three members of the program committee and consensus on acceptance was achieved by means of an electronic PC discussion. This LNCS volume contains the revised versions of the papers presented at SC 2005.
