Basic Statistics A. Maxwell, 2012-12-06 For many years now I have been required to give a series of elementary lectures on statistics to medical students about to undertake a postgraduate course in psychiatry The declared aim of the course for which very limited time was available was to provide the students with some initial understanding of the statistical terminology and elementary techniques to which other teachers in particular psychologists and sociologists would be likely to refer in the course of their lectures The task was tricky for two reasons In the first place most of the students involved despite their best intentions had forgotten their school mathematics and secondly no textbook existed at the right level of difficulty which contained examples appropriate to these students needs and experience The present book was written to fill the gap Though primarily intended for psychiatrists the book should prove very useful to any student of the behavioural sciences who wants a simple introductory course on the principles of experimental design and data analysis It must be one of the simplest text books on elementary statistics ever written I am indebted to the literary executor of the late Sir Ronald A Fisher F R S to Dr Frank Yates F R S and to Oliver Boyd Ltd for permission to reprint Tables 3 and 5 from their book Statistical Tables for Biological Agricultural and Medical Research

The Dyscalculia Assessment Jane Emerson, Patricia Babbie, 2014-12-08 The Dyscalculia Assessment is a tool for investigating pupils numeracy abilities It is designed to inform a personalised teaching programme for individuals or small groups of pupils who have difficulties with numbers The assessment was devised at Emerson House a specialist centre in London supporting pupils with difficulties in numeracy and literacy The bestselling first edition of the book written by Jane Emerson and Patricia Babbie was the winner of the ERA Best Special Educational Needs Resource 2011 This fully revised and

updated second edition features a brand new design making the step by step assessment even easier to navigate and use with SENCOs or those with no specific special needs training The suggested script for each stage of the investigation that runs alongside the photocopiable assessment sheets make this book an extremely user friendly accessible teaching and learning resource This book also includes an introduction to dyscalculia and co occurring conditions guidance on how to conduct the assessment including tips on behaviours to look out for information on the equipment you need and how to use it instructions on how to interpret the results of each stage of the assessment and how to produce a personalised teaching plan games and activities to engage the pupils and reinforce numeracy skills The Dyscalculia Assessment is ideal for use with primary school children but can easily be adapted for older students and is invaluable for SENCOs TAs educational psychologists and mainstream teachers keen to support students with numeracy difficulties in their class

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD

and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
