a group of people who have done recent advanced work in this field The papers in this volume are representative of a wide
variety of disciplines in which the use of latent variable models is rapidly growing The volume is divided into two broad
sections The first section covers Path Models and Causal Reasoning and the papers are innovations from contributors in
disciplines not traditionally associated with behavioural sciences e g computer science with Judea Pearl and public health
with James Robins Also in this section are contributions by Rod McDonald and Michael Sobel who have a more traditional
approach to causal inference generating from problems in behavioural sciences The second section encompasses new
approaches to questions of model selection with emphasis on factor analysis and time varying systems Amemiya uses
nonlinear factor analysis which has a higher order of complexity associated with the identifiability conditions Muthen studies
longitudinal hierarchical models with latent variables and treats the time vector as a variable rather than a level of
hierarchy Deleeuw extends exploratory factor analysis models by including time as a variable and allowing for discrete and
ordinal latent variables Arminger looks at autoregressive structures and Bock treats factor analysis models for categorical
