Teaching and Learning High School Mathematics Charlene E. Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans Mathematics Unit Planning in a PLC at Work®, High School Sarah Schuhl, Timothy D. School Alexander Karp, Nicholas Wasserman, 2014-11-01 The experience and knowledge acquired in teacher education courses should build important fundamentals for the future teaching of mathematics In particular experience in mathematical problem solving and in planning lessons devoted to problem solving is an essential component of teacher preparation This book develops a problem solving approach and is intended to be a text used in mathematics education courses or professional development for pre service or in service middle and secondary school teachers It can be used both in graduate and undergraduate courses in accordance with the focus of teacher preparation programs The content of the book is suited especially for those students who are further along in their mathematics education preparation as the text is more involved with mathematical ideas and problem solving and discusses some of the intricate pedagogical considerations that arise in teaching The text is written not as an introduction to mathematics education a first course but rather as a second or probably third course The book deals both with general methodology issues in mathematics education incorporating a problem solving approach Chapters 1 6 and with more concrete applications within the context of specific topics algebra geometry and discrete mathematics Chapters 7 13 The book provides opportunities for teachers to engage in authentic mathematical thinking The mathematical ideas under consideration build on specific middle and secondary school content while simultaneously pushing the teacher to consider more advanced topics as well as various connections across mathematical domains The book strives to preserve the spirit of discussion and at times even argument typical of collaborative work on a lesson plan Based on the accumulated experience of work with future and current teachers the book assumes that students have some background in lesson planning and extends their thinking further Specifically this book aims to provide a discussion of how a lesson plan is constructed including the ways in which problems are selected or invented rather than the compilation of prepared lesson plans This approach reflects the authors view that the process of searching for an answer is often more important than the formal result
