Learning-assisted Diagnosis and Control of Electric Distribution Network Chaolong Zhang,Xiao Wang,Aihong Tang,Weiham Yan,David Gao,2025-08-08 The digital transformation of modern power systems enables more robust and transparent system planning and operation This process is highly reliant on big data which is widely available through energy generation to utilization The distribution networks are exposed to high challenges due to the massive integration of renewables and electric vehicles at low voltages but opportunities do exist due to the widely available infrastructure for data collection and smart control at the distribution level For example the phase measurement unit PMU for better system observation in the transmission system has been extended to the distribution network where standard protocols are available for high precision data transmission in a sub second timescale Artificial intelligence AI technologies become the main enabler to utilize these data This provides revolutionary solutions covering fault diagnosis control and almost all aspects of modern electric power systems The values of AI in distribution networks are widely recognized especially for the increased complexity of distribution systems where active management and autonomous operation are urgently needed The typical mechanism based modeling and model based control lack adaptability under an evolving environment e g network topology changes that are more frequent at the distribution level However the existing AI technologies as well as the associated machine learning algorithms cannot be directly transplanted into the area of power systems To fulfill the strict technical requirements in power systems for security generalization capability interpretability out of sample performance robustness and reliability are the main issues to be addressed before their massive deployment Therefore this Research Topic aims to provide a contribution in line with this

area of research i.e innovative approaches and schemes for learning assisted diagnosis and control for the medium to low voltage distribution networks Original work focusing on the applications of state of art AI technologies in the power and energy related fields are invited Both high quality Original Research and Review Articles are welcome about the latest progress and potential research applications of the relevant areas with interests in modeling control monitoring and diagnosis of the distribution network using AI related techniques Holt Science and Technology Holt Rinehart & Winston,2004-02
