Values were used based on the regression, where $\alpha = 0.05$, except for those with $p < 0.001$ as the association in the other half of the population.

1. *Journal of the American Medical Association*, 2000; 283: 2689-2695.

- Operate with the most comprehensive representation of the population, which currently is 200,000. This enables us to offer representation to a representative cross population.
- "Represent" the population by making randomizations, sampling locations, characteristics and other easily-integrating variables.
- Generate the original sampling locations.
- Generate the "stratified locations" and the means to access them.
