Behind the scenes to hockey's hidden superstars the scouts who chase teenage prodigies and might never be across North America and around the world If you attend any junior minor or professional hockey game and you'll spot them often up in the rafters alone busily taking notes and calling their general managers These are the scouts the men and women who have made the job into a lifestyle chasing players across borders working the locals chatting with retired hockey people and visiting remote communities in hopes of finding the next one Yes they scout the likes of Connor McDavid and Connor Bedard and even Wayne Gretzky but scouts really make their mark by finding players who will fit in up and down the lineup the scorer having trouble finding the net the goalie who stands on her head to keep her team in the game the quiet winger who arrives at the rink first and leaves last Scouts don't just bird-dog talent they evaluate character and grit and drive looking for players who can play even a handful of games in the bigs Hockey's favourite raconteur Ken Reid tells us all about this secret club One scout found himself squeezed into a small car with a bunch of other scouts including Hall of Fame goalie Glenn Hall Former NHLer and pro scout Rick Knickle followed Jordin Tootoo of remote Rankin Inlet even though Tootoo didn't start playing the game until he was eleven years old One scout worked at a maximum security prison only to find himself as a pro scout Another scout went from a farmer who tried his hand at scouting to being a scout who happened to own a farm And Reid takes us behind the scenes at the nascent PWHL where teams furiously scouted their starting lineups with only a few weeks before the season began Always entertaining often illuminating and sometimes hilarious The Next One is the ideal book for

Foundations of Algebraic Specification and Formal Software Development Donald Sannella, Andrzej

Tarlecki, 2012-01-05 This book provides foundations for software specification and formal software development from the perspective of work on algebraic specification concentrating on developing basic concepts and studying their fundamental properties These foundations are built on a solid mathematical basis using elements of universal algebra category theory and logic and this mathematical toolbox provides a convenient language for precisely formulating the concepts involved in software specification and development Once formally defined these notions become subject to mathematical investigation and this interplay between mathematics and software engineering yields results that are mathematically interesting conceptually revealing and practically useful The theory presented by the authors has its origins in work on algebraic specifications that started in the early 1970s and their treatment is comprehensive This book contains five kinds of material the requisite mathematical foundations traditional algebraic specifications elements of the theory of institutions formal specification and development and proof methods While the book is self contained mathematical maturity and familiarity with the problems of software engineering is required and in the examples that directly relate to programming the authors assume acquaintance with the concepts of functional programming The book will be of value to researchers and advanced graduate students in the areas of programming and theoretical computer science

Engineering of Embedded Real-Time Systems Holger Giese, Gabor Karsai, Edward A. Lee, Bernhard Rumpe, Bernhard Schätz, 2010-10-06 The topic of Model Based Engineering of Real Time Embedded Systems brings together a challenging problem domain real time embedded systems and a solution domain model based engineering. It is also at the forefront of integrated software and systems engineering as software in this problem domain is an essential tool for system implementation and integration. Today real time embedded software plays a crucial role in most advanced technical systems such as airplanes, mobile phones and cars and has become the main driver and catalyst for innovation. Development, evolution, verification, configuration and maintenance of embedded and distributed software nowadays are often serious challenges as drastic increases in complexity can be observed in practice. Model based engineering in general and model based software development in particular advocates the notion of using models throughout the development and life cycle of an engineered system. Model based software engineering reinforces this notion by promoting models not only as the tool of abstraction but also as the tool for verification, implementation, testing and maintenance. The application of such model based engineering techniques to embedded real time systems appears to be a good candidate to tackle some of the problems arising in the problem domain.
