Midkiff, Jose E. Moreira, Manish Gupta, Siddhartha Chatterjee, Jeanne Ferrante, Jan Prins, William Pugh, Chau-Wen Tseng, 2003-06-29 This volume contains the papers presented at the 13th International Workshop on Languages and Compilers for Parallel Computing It also contains extended abstracts of submissions that were accepted as posters The workshop was held at the IBM T J Watson Research Center in Yorktown Heights New York As in previous years the workshop focused on issues in optimizing compilers languages and software environments for high performance computing This continues a trend in which languages compilers and software environments for high performance computing and not strictly parallel computing has been the organizing topic As in past years participants came from Asia North America and Europe This workshop reflected the work of many people In particular the members of the steering committee David Padua Alex Nicolau Utpal Banerjee and David Gelernter have been instrumental in maintaining the focus and quality of the workshop since it was first held in 1988 in Urbana Champaign The assistance of the other members of the program committee Larry Carter Sid Chatterjee Jeanne Ferrante Jans Prins Bill Pugh and Chau wen Tseng was crucial The infrastructure at the IBM T J Watson Research Center provided trouble free logistical support The IBM T J Watson Research Center also provided financial support by underwriting much of the expense of the workshop Appreciation must also be extended to Marc Snir and Pratap Pattnaik of the IBM T J Watson Research Center for their support El-Hi Textbooks & Serials in Print, 2000 ,2000

Books in Print ,1961 Mathematical Techniques Dominic William Jordan, Peter Smith, 1997 Undergraduate students of engineering science and mathematics must quickly master a variety of mathematical methods although many of these students do not have strong mathematics backgrounds In this well received book now in its second edition the authors use their extensive experience with diverse groups of students to provide an accessible introduction to mathematical techniques They start at the elementary level and proceed to cover the full range of topics typically encountered by beginning students BL Analytic geometry vector algebra vector fields div and curl differentiation and integration BL Complex numbers matrix operations and linear systems of equations BL Differential equations and first order linear systems functions of more than one variable double integrals and line integrals BL Laplace transforms Fourier series and Fourier transforms BL Probability and statistics Incorporating many suggestions from readers this new edition has expanded discussions of vectors and new chapters on Fourier series and on probability and statistics The emphasis throughout is on understanding concepts through well chosen examples and the book includes over 500 fully worked problems As far as is possible chapter topics are self contained so that a student only needing to master certain techniques can omit others without trouble The generously illustrated text also includes simple numerical processes which lead to examples and projects for computation particularly with Mathematica and contains a large number of exercises with answers to reinforce the material These features combine to make this book an ideal starting point for students entering the sciences General Catalogue of Printed Books British Museum.
