Rules, Rubrics and Riches Shailaja Fennell, 2013-02-01 *Rules Rubrics and Riches* highlights the limitations of existing approaches to understanding the relationship of the law to the process of development. It interrogates neoclassical economic thinking that draws on the narrow rubric of self interest to understand the acquisition of riches. It takes issue with both the traditional law and development movement that was unable to shake colonial overtones and the more recent law and economics school that continues to emphasise the centrality of rational man at the micro level and the superiority of linear models of economic progress at the macro level. Written as an analysis of and commentary on the contribution of the law to international development using legal cases and development trajectories in China, India and Malaysia, the book makes the case that individuals do not operate in a vacuum but rather within the social contexts of larger human structures such as family, community and nation. *Rules Rubrics and Riches* is distinctive in the view that demanding equality for the individual is inappropriate if this occurs without looking at the broader context of the need for equity within families, communities and nations. The book offers a new frame for law and development thinking that points to a new set of rules using a broader rubric to ensure a sustainable accumulation of riches. It will be of interest to students and scholars working in the fields of law and development, development studies and international and comparative law.

Graduate Students Becoming Qualitative Researchers Char Ullman, Kate Mangelsdorf, Jair Muñoz, 2020-11-23 Through conducting an ethnographic study about doctoral students from traditionally underrepresented groups who are learning to conduct ethnographic research, this volume offers unique insight into the challenges and experiences through which these students develop their skills and identities as qualitative researchers. Foregrounding the stories and perspectives of students from minority backgrounds including Latinx, Black, differently abled and queer students, *Graduate Students Becoming Qualitative Researchers* identifies how the process of learning to conduct ethnographic research underpins doctoral students' success, confidence and persistence in the academy. Chapters follow students during a one-year ethnographic research course during which they learn about ethnography and also conduct observations, write field notes, interview participants and gather artifacts. Offering important pedagogical insights into how ethnography and academic writing are communicated, the text also tackles questions of access and diversity within scholarship and highlights barriers to first-generation and minoritized students' success, including impostor syndrome, stereotype vulnerability and access to time, knowledge and capital. This volume will prove valuable to doctoral students, postgraduate researchers, scholars and educators conducting qualitative research across the fields of education and rhetoric as well as the humanities and social sciences. It will also appeal to those interested in multiculturalism and diversity within the education sector.
