Run Time Adaptation For Reconfigurable Embedded Processors:

Run-time Adaptation for Reconfigurable Embedded Processors Lars Bauer, Jörg Henkel, 2010-12-01 Embedded processors are the heart of embedded systems Reconfigurable embedded processors comprise an extended instruction set that is implemented using a reconfigurable fabric similar to a field programmable gate array FPGA This book presents novel concepts strategies and implementations to increase the run time adaptivity of reconfigurable embedded processors Concepts and techniques are presented in an accessible yet rigorous context A complex realistic H 264 video encoder application with a high demand for adaptivity is presented and used as an example for motivation throughout the book A novel run time system is demonstrated to exploit the potential for adaptivity and particular approaches algorithms are presented to implement it

Embedded, Cyber-Physical, and IoT Systems Shuvra S. Bhattacharyya, Miodrag Potkonjak, Senem Velipasalar, 2019-06-29 This Festschrift is in honor of Marilyn Wolf on the occasion of her 60th birthday Prof Wolf is a renowned researcher and educator in Electrical and Computer Engineering who has made pioneering contributions in all of the major areas in Embedded Cyber Physical and Internet of Things IoT Systems This book provides a timely collection of contributions that cover important topics related to Smart Cameras Hardware Software Co Design and Multimedia applications Embedded systems are everywhere cyber physical systems enable monitoring and control of complex physical processes with computers and IoT technology is of increasing relevance in major application areas including factory automation and smart cities Smart cameras and multimedia technologies introduce novel opportunities and challenges in embedded cyber physical and IoT applications Advanced hardware software co design methodologies provide valuable concepts and tools for addressing these challenges The diverse topics of the chapters in this Festschrift help to reflect the great breadth and depth of Marilyn Wolf's contributions in research and education The chapters have been written by some of Marilyn's closest collaborators and colleagues

Field-Programmable Logic and Applications: Reconfigurable Computing Is Going Mainstream Manfred Glesner, Peter Zipf, Michel Renovell, 2003-08-02 This book constitutes the refereed proceedings of the 12th International Conference on Field Programmable Logic and Applications FPL 2002 held in Montpellier France in September 2002 The 104 revised regular papers and 27 poster papers presented together with three invited contributions were carefully reviewed and selected from 214 submissions The papers are organized in topical sections on rapid prototyping FPGA synthesis custom computing engines DSP applications reconfigurable fabrics dynamic reconfiguration routing and placement power estimation synthesis issues communication applications new technologies reconfigurable architectures multimedia applications FPGA based arithmetic reconfigurable processors testing and fault tolerance crypto applications multitasking compilation techniques etc

Hardware/Software Architectures for Low-Power Embedded Multimedia Systems Muhammad Shafique, Jörg Henkel, 2011-07-25 This book presents techniques for energy reduction in adaptive embedded multimedia systems based on dynamically reconfigurable

processors The approach described will enable designers to meet performance area constraints while minimizing video quality degradation under various run time scenarios Emphasis is placed on implementing power energy reduction at various abstraction levels To enable this novel techniques for adaptive energy management at both processor architecture and application architecture levels are presented such that both hardware and software adapt together minimizing overall energy consumption under unpredictable design compile time scenarios

3D Video Coding for Embedded Devices

Bruno Zatt,Muhammad Shafique,Sergio Bampi,Jörg Henkel,2014-07-08 This book shows readers how to develop energy efficient algorithms and hardware architectures to enable high definition 3D video coding on resource constrained embedded devices Users of the Multiview Video Coding MVC standard face the challenge of exploiting its 3D video specific coding tools for increasing compression efficiency at the cost of increasing computational complexity and consequently the energy consumption This book enables readers to reduce the multiview video coding energy consumption through jointly considering the algorithmic and architectural levels Coverage includes an introduction to 3D videos and an extensive discussion of the current state of the art of 3D video coding as well as energy efficient algorithms for 3D video coding and energy efficient hardware architecture for 3D video coding

Reconfigurable Computing

Joao Cardoso,Michael Hübner,2011-08-17 As the complexity of modern embedded systems increases it becomes less practical to design monolithic processing platforms As a result reconfigurable computing is being adopted widely for more flexible design Reconfigurable Computers offer the spatial parallelism and fine grained customizability of application specific circuits with the postfabrication programmability of software To make the most of this unique combination of performance and flexibility designers need to be aware of both hardware and software issues FPGA users must think not only about the gates needed to perform a computation but also about the software flow that supports the design process The goal of this book is to help designers become comfortable with these issues and thus be able to exploit the vast opportunities possible with reconfigurable logic

Embedded and Multimedia Computing Technology and Service James J.
