Volume 1 Strategic Information and Contacts IBP, Inc, **Climate Change Discourse in Russia** Marianna Poberezhskaya, Teresa Ashe, 2018-08-06 This book explores the development of climate change discourses in Russia It contributes to the study of climate change as a cultural idea by developing the extensive Anglophone literature on environmental science politics and policy pertaining to climate change in the West to consider how Russian discourses of climate change have developed Drawing on contributors specialising in numerous periods regions disciplines and topics of study the central thread of this book is the shared attempt to understand how environmental issues particularly climate change have been understood investigated and conceptualised in Soviet and post Soviet Russia The chapters aim to complement work on the history of the discursive political construction of climate change in the West by examining a highly contrasting but intimately related cultural context Russia remains one of the world s largest greenhouse gas emitters with one of the most carbon intensive economies As the world begins to suffer the extreme consequences of anthropogenic climate change finding adequate solutions to global environmental problems necessitates the participation of all countries Russia is a central actor in this global process and it therefore becomes increasingly important to understand climate change discourse in this region Insights gained in this area may also be illuminating for examining environmental discourses in other resource rich regions of the world with alternative economic and political experiences to that of the West e g China Middle East This book will be of great interest to students and scholars of Russian environmental policy and politics climate change discourses environmental communication and environment and sustainability in general **The Soviet Union and Global Environmental Change** Jonathan D. Oldfield, 2021-05-26 This book argues that the Soviet Union was a highly influential actor in furthering understandings of society nature interaction on the international stage and played a key role in helping to shape conceptualize and assess the relationship between humankind and the Earth system It considers how humankind s capacity to affect physical and biological systems at a global scale was acknowledged and studied by Soviet scientists discusses how the interaction between Soviet and Western scientists stimulated the development of new technologies and insights which simultaneously facilitated a more profound understanding of the Earth s physical and biological systems and explores how Soviet scientists drew upon pre revolutionary intellectual traditions in order to make sense of society nature interaction and did so in collaboration with a range of international initiatives Overall the book provides a deep analysis of how Soviet scientists conceptualized society nature interaction and influenced the understanding of global physical and biological systems Furthermore it is argued that this intellectual legacy remains of importance today with respect to the activities of Russian science and contemporary global environmental challenges **Grain World** ,1928 **Climate Change and Air Pollution** Rais Akhtar, Cosimo Palagiano, 2017-10-05 This book discusses regional and international climate change

air pollution and human health scenarios The research from both industrialized and developing countries focuses on region specific perspectives of climate change impacts on air pollution After analyzing the variations of climate data over recent decades the authors consider the different effects of climate change on air pollution and health As stressed by the IPCC pollen smoke and ozone levels are likely to increase in a warming world affecting the health of residents of major cities Rising temperatures will worsen air quality through a combination of more ozone in cities bigger wild fires and worse pollen outbreaks according to a major UN climate report The report follows the World Health Organization in finding that air pollution is the world's greatest environmental health risk killing 7 million people in 2014 compared to 0.4 million deaths due to malaria Deteriorating air quality will most affect the elderly children people with chronic ill health and expectant mothers Another report suggests that more than 5.5 million people die prematurely each year due to air pollution with over half of those deaths occurring in China and India A study on the air pollution in the USA suggests that more than half of US population lives in areas with potentially dangerous air pollution and about six out of 10 of the top cities for air pollution in the USA are located in the state of California In the face of future climate change scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems especially in more populated regions of the world It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution Additionally the authors consider the various measures that different countries and groups of countries like the European Union have adopted to mitigate the problems arising from climate change and to safeguard the health of population The book examines the increasing incidence of diseases largely caused by climate change The countries regions covered in this study include the USA Northern Europe U K Southern Europe Italy Canada Australia East Asia Russia Hong Kong Taiwan Thailand Malaysia Indonesia India South Africa Mexico Brazil Caribbean countries and Argentina
