

Membrane Structure

What molecules make up a membrane?

Why?

Imagine your bedroom without closets, drawers, shelves, bags or boxes—just a room with a bed. Where would your stuff be? Would you be able to find the things you needed? How efficiently could you get ready for school in the morning? Would all of your school items be together when you sat down to study? The compartments you use in your room—the closet, drawers, etc.—help you organize items by category so that all the items you need to get dressed are in one place. All the items you need for studying are in another place. This compartmentalization improves efficiency. Cells also need organization to improve efficiency. The compartmentalization of cells is achieved by dividing up areas in the cell with membranes. A plasma membrane compartmentalizes internal structures while the cell membrane acts as a boundary between the cell and the external environment.

Model 1 – Phospholipids

1. Consider the term phospholipid.
 - a. What portion of the molecule in Model 1 is responsible for the “phospho-” part of the name?
Phosphorus function group and glycerol
 - b. What portion of the molecule in Model 1 is responsible for the “-lipid” part of the name?
The fatty and acid chain
2. Part of a phospholipid is polar. *Click on the molecule picture in Model 1 to edit*
 - a. Circle the portion of the molecule in Model 1 that is polar.
 - b. Would this portion of the phospholipid mix well with water? Explain your reasoning.
