It is difficult to make any definite conclusions from these presentations and discussions but the desire and drive for improvement and development shown by the participants/authors are surely remarkable and respectable. In this book 70 papers are included chosen from hundreds of submissions contributed by scientists from various countries and regions after careful reading and discussing by a team of reviewers. These papers cover almost every possible aspect of communication technology including communication systems, automation and control engineering, electrical engineering, AI, algorithms, signal processing, data mining and knowledge based systems. **Proceedings of the Future Technologies**
