O'Neil, 1994 **Sturgeon biodiversity and conservation** Vadim J. Birstein, John R. Waldman, William E. Bemis, 1997-05-31 This volume presents a synthesis of basic biological and conservation data for more than 30 species of sturgeons Acipenseridae paddlefishes Polyodontidae and their fossil allies in the order Acipenseriformes

Since the Jurassic the four families of sturgeon like fish have been restricted to the Holarctic where until very recently they flourished in most major river systems Today however virtually all species of sturgeons and paddlefishes face difficult conservation issues Papers in the first section of this volume examine paleontology systematics evolution and basic biology of Acipenseriformes The second section of this volume details current conservation status for most of the world's living species of Acipenseriformes These papers mark the first attempt to make such a global review of recent data from across the northern hemisphere The emerging picture is discouraging for negative anthropogenic impacts range from overfishing to water pollution to dams and water diversion projects and all species are threatened to some degree The third section of the volume considers specific human impacts and responses to conservation issues These include the Aral Sea ecological disaster and its impact on native sturgeons a review of methods for restoring sturgeon populations the use of molecular techniques in developing conservation strategies the extreme sensitivity of sturgeons and paddlefishes to overfishing and the history of a recently convicted caviar poaching ring The volume's summary reviews the status of all extant species and notes future directions for research on behavior ecology and population biology that could lead to better coordinated international conservation efforts

of Food Industry Sustainability Cheryl J. Baldwin, 2015-01-20 Although the food industry is beginning to make headway with its sustainability initiatives substantially more progress is needed in order to feed the world's growing population sustainably. The challenge is that the topic of sustainability can seem overwhelming and there is limited information that is specific to the food industry. Written by an experienced food industry professional with years of experience in sustainability, *The 10 Principles of Food Industry Sustainability* inspires and informs the progress required to nourish the population, revitalize natural resources, enhance economic development, and close resource loops. The book makes this complex topic approachable and actionable by identifying the most pressing sustainability priorities across the entire food supply chain and showing with tools and examples how producers, processors, packers, distributors, marketers, and retailers all play a role in advancing improvement. The book begins with an overview of the Principles of sustainability in the food industry, what they are, and why they matter. Subsequent chapters focus on each of the Ten Principles in detail, how they relate to the food industry, their global relevance, including their environmental, health, and social impacts, and the best practices to achieve the potential of meaningful and positive progress that the Principles offer. Specific examples from industry are presented in order to provide scalable solutions and bring the concepts to life, along with top resources for further exploration. The Principles, practices, and potential of sustainability in the food industry covered in this book are designed to be motivating and to offer a much-needed and clear way forward towards a sustainable food supply.

Evolutionary Biology - Mechanisms and Trends Pierre Pontarotti, 2012-06-30 Comprehensively illustrated and written by leading researchers, this invaluable publication features papers from the annual Evolutionary Biology meetings in Marseilles. It includes a description of the life and work of the celebrated biologist J. B. S. Haldane.

Resources in Education, 1990 *Climate Change Adaptation Plan for Australian Birds* Stephen Garnett, Donald Franklin, 2014-05-30 This is the first climate change adaptation plan produced for a national faunal group anywhere in the world. It outlines the nature of threats related to climate change for the Australian bird taxa most likely to be affected by climate change and provides recommendations on what might be done to assist them and approximate costs of doing so. It also features an analysis of how climate change will affect all Australian birds, explains why some species are likely to be more exposed or sensitive to it than others, and explores the theory and practice of conservation management under the realities of a changing climate. Species profiles include maps showing current core habitat and modelled climatic suitability based on historical records, as well as maps showing projected climatic suitability in 2085 in relation to current core habitat. *Climate Change Adaptation Plan for Australian Birds* is an important reference for policy makers, conservation scientists, land managers, climate change adaptation biologists, as well as bird watchers and advocacy groups.
