[Arctic Alpine Ecosystems and People in a Changing Environment](#) Jon Børre Ørbaek, Roland Kallenborn, Ingunn Tombre, Else N. Hegseth, Stig Falk-Petersen, Alf H. Hoel, 2007-01-10 This book addresses the significant environmental changes experienced by high

latitude and high altitude ecosystems at the beginning of the 21st century Increased temperatures and precipitation reduction in sea ice and glacier ice the increased levels of UV radiation and the long range transported contaminants in arctic and alpine regions are stress factors that challenge terrestrial and aquatic ecosystems The large natural variation in the physical parameters of these extreme environments is a key factor in structuring the biodiversity and biotic productivity and the effect of the new stress factors can be critical for the population structures and the interaction between species These changes may also have socio economic effects if the changes affect the bio production which form the basis for the marine and terrestrial food chains The book is uniquely multidisciplinary and provides examples of various aspects of contemporary environmental change in arctic and alpine regions The 21 chapters of the book are organised under the fields of Climate change and ecosystem response Long range transport of pollutants and ecological impacts and UV radiation and biological effects each also including aspects of the Socio economic effects of environmental change The introductory chapter presents and explains the internal connection and integration of all chapters The added value of these reviews and review like manuscripts from different disciplines hopefully yields new information about the integrated aspects of environmental change
