

Solutions to Exercises 1.1

1. Al-Khwarizmi (9th century C.E.) was a great Arabic scholar, most famous for his algebra textbook. In fact, the word “algebra” is derived from the Arabic title of this book while the word “algorithm” is derived from a translation of Al-Khwarizmi’s last name (see, e.g., [Knuf], pp. 1-2, [Knu96], pp. 88-92, 114).
2. This legal issue has yet to be settled. The current legal state of affairs distinguishes mathematical algorithms, which are not patentable, from other algorithms, which may be patentable if implemented as computer programs (e.g., [Cha00]).
3. n/a
4. A straightforward algorithm that does not rely on the availability of an approximate value of $\sqrt{n}$ can check the squares of consecutive positive integers until the first square exceeding n is encountered. The answer will be the number’s immediate predecessor. Note: A much faster algorithm for solving this problem can be obtained by using Newton’s method (see Sections 11.4 and 12.4).

6. To compute the square root of a number n , we can use the following algorithm. The algorithm starts with an initial value x_0 and iteratively improves the estimate of the square root. The algorithm terminates when the estimate is sufficiently close to the square root of n . The algorithm is as follows:

```
function sqrt(n)
    x0 = 1
    while true
        x1 = (x0 + n/x0) / 2
        if |x1 - x0| < epsilon
            return x1
        x0 = x1
```

Computer-Aided Transit Scheduling Joachim R. Daduna, Anthony Wren, 2012-12-06 This volume consists of papers presented at the Fourth International Workshop on Computer Aided Scheduling of Public Transport which was held in Hamburg from 28th to 31st July 1987 The first of this series of Workshops was held in Chicago in 1975 Papers presented then tended to look forward to what might be done in the future application of computers to problems in transit scheduling No presentations described systems which had been implemented and were being used on a regular basis although a few papers discussed apparently

successful once off applications in both bus scheduling and bus crew scheduling or run cutting. However, within a few months of the end of that first workshop, some systems had been implemented both in Europe and in North America. By the time of the second Workshop in Leeds in 1980, several systems were in regular use. Most of the crew scheduling implementations were based on heuristic methods, e.g. RUCUS, although mathematically based methods were being used in Quebec City and in Hamburg, and several papers described further mathematical methods in the course of development. A wide variety of bus scheduling approaches was reported, many of them being in regular use.

The Algorithm Design Manual: Text Steven S. Skiena, 1998. This volume helps take some of the mystery out of identifying and dealing with key algorithms. Drawing heavily on the author's own real world experiences, the book stresses design and analysis. Coverage is divided into two parts: the first being a general guide to techniques for the design and analysis of computer algorithms. The second is a reference section which includes a catalog of the 75 most important algorithmic problems. By browsing this catalog, readers can quickly identify what the problem they have encountered is called, what is known about it, and how they should proceed if they need to solve it. This book is ideal for the working professional who uses algorithms on a daily basis and has need for a handy reference. This work can also readily be used in an upper division course or as a student reference guide.

THE ALGORITHM DESIGN MANUAL comes with a CD ROM that contains a complete hypertext version of the full printed book, the source code and URLs for all cited implementations. Over 30 hours of audio lectures on the design and analysis of algorithms are provided, all keyed to on-line lecture notes.
