The Ultimate Diabetic Recipe Book Emilie Vans, 2022-01-28 Diabetes is an illness that affects millions of people worldwide. People with diabetes have low or no insulin production in their pancreas which causes high glucose levels. When this happens, blood sugar can build up so high which can lead to several health problems. If you think someone you know may have diabetes or if you are concerned about your own diabetes symptoms, take action today. Diabetes is an illness that is caused by a lack of insulin. Insulin is a hormone produced in the pancreas that allows your cells to take sugar from food and use it for energy. When there is not enough insulin, glucose builds up in the blood stream and the body begins to produce more and more insulin. The body eventually stops producing any insulin at all. This condition is called diabetes. This causes the body to lose its ability to regulate blood sugar levels which leads to surges in blood sugar after meals. Diabetes is a disease that affects many parts of the body. It can be caused by both your internal and external factors. Your Internal Factors: If you suffer from diabetes, your body will no longer respond to insulin properly and your cells will not absorb glucose properly. This is a dangerous situation because the cells will start to starve and eventually die off. Your Internal Factors: If you suffer from diabetes, your body will no longer respond to insulin properly and your cells will not absorb glucose properly. This is a dangerous situation because the cells will start to starve and eventually die off. External Factors: If you suffer from diabetes, your diet may be faulty as well which could lead to the starvation of your cells. The solution here is simple. If you eat in accordance with the dietary instructions, you needn't worry about starvation from diabetes. The solution here is simple.
