with the decline but not disappearance of macroeconomic issues as well as the rise in new politics issues together with education and health care. Moreover, various new politics issues such as immigration, the environment, and European integration have seen very different trajectories. To explain the development of the individual issues, this volume develops a new theoretical model labelled the issue incentive model of party system attention. The aim of the model is to explain how much attention issues get throughout the party system, which is labelled the party system agenda. To explain the development of the party system agenda, one needs to focus on the incentives that individual policy issues offer to large mainstream parties, i.e. the typical Social Democratic, Christian Democratic, or Conservative Liberal parties that have dominated West European governments for decades. The core idea of the model is that the incentives that individual policy issues offer to these vote and office seeking parties depend on three factors: namely, issue characteristics, issue ownership, and coalition considerations. The issue incentive model builds on and develops a top-down perspective on which the issue content of party politics is determined by the strategic considerations of political parties and their competition with each other.

Comparative Politics is a series for researchers, teachers, and students of political science that deals with contemporary government and politics. Global in scope, books in the series are characterised by a stress on comparative analysis and strong methodological rigour. The series is published in association with the European Consortium for Political Research. For more information, visit www.ecpr.net. The series is edited by Emilie van Haute, Professor of Political Science, Université libre de Bruxelles; Ferdinand Müller-Rommel, Director of the Center for the Study of Democracy, Leuphana University; and Susan Scarrow John and Rebecca Moores, Professor of Political Science, University of Houston.

Routledge Handbook of Ecological Economics Clive L. Spash, 2017-04-07. Since becoming formally established with an international academic society in the late 1980s, ecological economics has advanced understanding of the interactions between social and biophysical reality. It initially combined questioning of the basis of mainstream economics with a concern for environmental degradation and limits to growth, but has now advanced well beyond critique into theoretical, analytical, and policy alternatives. Social ecological economics and transformation to an alternative future now form core ideas in an interdisciplinary approach combining insights from a range of disciplines, including heterodox economics, political ecology, sociology, political science, social psychology, applied philosophy, environmental ethics, and a range of natural sciences. This handbook, edited by a leading figure in the field, demonstrates the dynamism of ecological economics in a wide-ranging collection of state-of-the-art essays. Containing contributions from an array of international researchers who are pushing the boundaries of the field, the *Routledge Handbook of Ecological Economics* showcases the diversity of the field and points the way forward. A critical analytical perspective is combined with realism about how economic systems operate and their essential connection to the natural world and society. This provides a rich understanding of how biophysical reality relates to and integrates with social reality. Chapters provide succinct overviews of the literature covering a range of subject areas, including heterodox thought on the environment, society, power,

and politics markets and consumption value and ethics science and society methods for evaluation and policy analysis policy challenges and the future post growth society The rich contents dispel the myth of there being no alternatives to current economic thought and the political economy it supports The Routledge Handbook of Ecological Economics provides a guide to the literature on ecological economics in an informative and easily accessible form It is essential reading for those interested in exploring and understanding the interactions between the social ecological and economic and is an important resource for those interested in fields such as human ecology political ecology environmental politics human geography environmental management environmental evaluation future and transition studies environmental policy development studies and heterodox economics , Economic and Business Management Xiaoxia Huang,Feng Zhang,2022-03-22 With the rapid development and drastic change of the world economy Digital Finance Internet Finance Science and Technology Finance have become new hotspots which also represent the future trend of economy development in the era of big data Enterprises are facing more uncertainty opportunities coexist with challenges There are more possibilities for economic development and enterprise management to accelerate the integration of cutting edge research results to deepen hot topics discussion and to promote opinion exchanges among academic and business circles The Sixth International Conference on Economic and Business Management FEBM2021 was successfully held online on October 16 17 2021 and aimed to provide a platform for researchers engineers academics as well as industry professionals from all over the world to present their latest research findings and development activities in economic and business management These proceedings include 51 accepted articles selected from 94 submissions Performance of Development Programmes in India-Issues and Challenges Prof. P.
