debated of recent years with scientists and companies seeking to develop the technology on one side and consumer groups and environmentalists on the other. However, in spite of the great heat generated by the debate, there is very little real information on the subject either about the technologies in use or about the regulatory processes established to approve the processes and the products. This book sets out to explain in clear and direct language the technologies underlying so-called genetically modified food and compares them with other natural methods of plant breeding and production. The author then looks at the safeguards in place from regulators around the world and asks whether these are sufficient. The question of labelling, held by some to be an obvious way out for concerned consumers, is examined and the honesty and usefulness of some of these labels addressed. The book then looks at issues of real concern, particularly environmental issues and ways in which a consumer can seek to avoid GMOs if they so choose. In each chapter, key topics are addressed through question and answer boxes. Real case histories illustrate the development and regulation of GMOs and by the end of the book, the reader will be able to make an informed choice about whether to support or challenge this technology, the products of which are increasingly pervasive.
