

Fluids and Pressure

BEFORE YOU READ

After you read this section, you should be able to answer these questions:

- What are fluids?
- What is atmospheric pressure?
- What is water pressure?
- What causes fluids to flow?

What Are Fluids?

You have something in common with a dog, a sea gull, and a dolphin. You and all these other animals spend a lifetime moving through fluids. A **fluid** is any material that can flow and that takes the shape of its container. Fluids have these properties because their particles can easily move past each other. Liquids and gases are fluids. 

Fluids produce pressure. **Pressure** is the force exerted on a given area. The motions of the particles in a fluid are what produce pressure. For example, when you pump up a bicycle tire, you push air into the tire. Air is made up of tiny particles that are always moving. When air particles bump into the inside surface of the tire, the particles produce a force on the tire. The force exerted on the area of the tire creates air pressure inside the tire.

The air particles inside the tire hit the walls of the tire with a force. This force produces a pressure inside the tire. The pressure keeps the tire inflated.

PRESSURE AND BUBBLES

Why are bubbles round? It's because fluids (such as the gas inside the bubbles) exert the same pressure in all directions. This gives the bubbles their round shape.

STUDY TIP

Explain As you read this section, study each figure. In your notebook, describe what each figure tells you about pressure.

been called engineering methods is considered in Chapter 2 where the Reynolds averaged equations are established and the closure problem studied. A first detailed study of homogeneous turbulent flows follows. It includes a review of available experimental data and their modeling. The eddy viscosity concept is analyzed in 5 with the resulting transport equation models such as the famous K- ϵ model. Reynolds stress models. Chapter 4 requires a preliminary consideration of two point turbulence concepts which are developed in Chapter 3 devoted to homogeneous turbulence. We review the two point moments of velocity fields and their spectral transforms. 1 their general dynamics. 2 with the particular case of homogeneous isotropic turbulence. 3 where the so called Kolmogorov's assumptions are discussed at length. Geophysics Today Sergey Fomel, 2010. In celebration of the 75th year of publication the Geophysics editorial team invited a collection of papers written by well recognized experts in various areas of exploration geophysics. These invited papers not only form part of the present book but they also appear in the September-October 2010 special section of the journal Geophysics Today. A Survey of the Field as the Journal Celebrates its 75th Anniversary complements this special section with an additional group of papers drawn from Geophysics to address areas beyond the invited articles. The result is a snapshot of the state of the art in the field as Geophysics passes its three quarter century mark. Interdisciplinary and Advanced Topics in Science and Engineering Volume 3 Separation of Flow presents the problem of the separation of fluid flow. This book provides information covering the fields of basic physical processes, analyses and experiments concerning flow separation. Organized into 12 chapters, this volume begins with an overview of the flow separation on the body surface as discussed in various classical examples. This text then examines the analytical and experimental results of the laminar boundary layer of steady two dimensional flows in the subsonic speed range. Other chapters consider the study of flow separation on the two dimensional body flow separation on three dimensional body shape and particularly on bodies of revolution. This book discusses as well the analytical solutions of the unsteady flow separation. The final chapter deals with the purpose of separation flow control to raise efficiency or to enhance the performance of vehicles and fluid machineries involving various engineering applications. This book is a valuable resource for engineers.
