Making up Numbers: A History of Invention in Mathematics Ekkehard Kopp, 2020-10-23 Making up Numbers A History of Invention in Mathematics offers a detailed but accessible account of a wide range of mathematical ideas Starting with elementary concepts it leads the reader towards aspects of current mathematical research The book explains how conceptual hurdles in the development of numbers and number systems were overcome in the course of history from Babylon to Classical Greece from the Middle Ages to the Renaissance and so to the nineteenth and twentieth centuries The narrative moves from the Pythagorean insistence on positive multiples to the gradual acceptance of negative numbers irrationals and complex numbers as essential tools in quantitative analysis Within this chronological framework chapters are organised thematically covering a variety of topics and contexts writing and solving equations geometric construction coordinates and complex numbers perceptions of infinity and its permissible uses in mathematics number systems and evolving views of the role of axioms Through this approach the author demonstrates that changes in our understanding of numbers have often relied on the breaking of long held conventions to make way for new inventions at once providing greater clarity and widening mathematical horizons Viewed from this historical perspective mathematical abstraction emerges as neither mysterious nor immutable but as a contingent developing human activity Making up Numbers will be of great interest to

undergraduate and A level students of mathematics as well as secondary school teachers of the subject In virtue of its detailed treatment of mathematical ideas it will be of value to anyone seeking to learn more about the development of the subject
