

A4.2 Conservation of Biodiversity

HL

Guiding questions

- What factors are causing the sixth mass extinction of species?
- How can conservationists minimize the loss of biodiversity?

A4.2.1—Biodiversity as the variety of life in all its forms, levels and combinations

Biodiversity is an abbreviation for biological diversity and includes:

- _____ diversity—the variety of the combination of species living together in communities
- _____ diversity—the many species on the evolutionary tree of life
- _____ diversity within species—there is variation in the gene pool of each species

Biodiversity can be measured by:

1. _____—the number of species present
2. _____—having a similar abundance of each species present

A4.2.2—Comparisons between current number of species on Earth and past levels of biodiversity

Millions of species have been discovered, named and described but there are _____ species to be discovered. Evidence from fossils suggests that there are currently _____ species alive on Earth today than at any time in the past. There have been _____ mass extinctions when many species disappeared:

- The most recent was 66 million years ago when a huge _____ collided with the earth causing many species to die out, including all non-avian dinosaurs.
- The previous four mass extinctions have been attributed to _____ and major changes to the atmosphere and _____.

Between mass extinctions, biodiversity tends to _____ gradually as new species evolve. Because there have been no mass extinction events for 66 million years, biodiversity has been able to increase dramatically. However, _____ is causing what is predicted to be the _____ mass extinction, so this peak of biodiversity is unlikely to be sustained.

A4.2.3—Causes of anthropogenic species extinction

Causes of _____ species extinction (which means due to human activities):

1. _____—humans take plants and animals from natural ecosystems by hunting animals and harvesting plants. If species are taken at a _____ than they can reproduce, extinction will occur.
2. ~~Habitat destruction~~—natural habitats such as forests or grasslands were destroyed for agriculture and towns.
3. ~~Exotic species~~—when alien species are introduced to ecosystems either on purpose or by accident, they can drive native species to extinction by predation, spreading of pests or diseases, or competition for resources.
4. _____—examples include plastic waste washing up on beaches and burning of fossil fuels.
5. _____—if environmental conditions change slowly, plants and animals can adapt to new conditions. However, human activities are causing very _____ changes in temperature, rainfall, and snow cover, and some species will be unable to adapt and will face extinction.

Determine the causes of extinction of the following species:

North Island giant moose (<i>Peromyscus novaezealandiae</i>)		
Caribbean monk seals (<i>Monachus tropicalis</i>)		
Mount Glorious banded frog (<i>Rhombophryne dumalis</i>)
