MATTER AND CHANGE

SECTION 2.1 PROPERTIES OF MATTER (pages 39–42)

This section helps you distinguish extensive from intensive properties and identify substances by their properties. It teaches you how to differentiate the three states of matter. It also defines a physical property and lists examples of physical properties and physical changes.

► Describing Matter (page 39)

1. The _____ mass _____ of an object is a measure of the amount of matter the object contains.

2. How does an extensive property differ from an intensive property?

An extensive property depends on the amount of matter, while an intensive property depends on the type of matter.

► Identifying Substances (page 40)

3. Matter that has a uniform and definite composition is called a _____ substance _____.

4. Is the following sentence true or false? All samples of a substance have different physical properties. _____ false _____

5. A physical property is a quality or condition of a substance that can be _____ observed _____ or _____ measured _____ without changing the substance's composition.

6. Circle the letter of the term that is NOT a physical property.

- a. hardness c. boiling point
b. color d. melting

7. Look at Table 2.1 on page 40. What is the melting point of bromine? _____ -7°C _____

8. Look at Table 2.1 on page 40. Circle the letter of the substance that is a yellow solid and melts at 115°C.

- a. sulfur
b. chlorine
c. gold
d. copper

This text is intended for a course of about fifteen weeks for undergraduate students It arises from the adaptation and the amendments to a text for a full year course in Structure of Matter written by one of the authors A R about thirty years ago At that time only a few if any textbooks having the suited form for introduction to basic quantum properties of atoms molecules and crystals in a comprehensive and interrelated way were available Along the last twenty years many excellent books pursuing the aforementioned aim have been published some of them are listed at the end of this preface Still there are

reasons in our opinion to attempt a further text devoted to the quantum roots of condensed matter properties A practical aspect in this regard involves the organization of the studies in Physics after the huge scientific outburst of the various topics of fundamental and technological character in recent decades In most Universities there is now a first period of three or four years common to all the students and devoted to elementary aspects followed by a more advanced program in rather specialized fields of Physics

Classical Physics of Matter J Bolton, 2000-06-01 Classical Physics of Matter explores the properties of matter that can be explained more or less directly in terms of classical physics Among the topics discussed are the principles of flight and the operation of engines and refrigerators The discussion introduces ideas such as temperature heat and entropy that will take you beyond Newtonian mechanics and into the realm of thermodynamics and statistical physics

Dark Matter in the Universe Società italiana di fisica, 1996 Physics and astrophysics came to dark matter through many different routes finally accepting it but often with some distaste It has been noticed that the existence of dark matter is yet another displacement of humans from the centre of the Universe not only do our planet and our sun have no central position in the Universe not only are humans just animals although with a specialized central nervous system but even the material of which we are made is only a marginal component of the cosmic substance If this is the right attitude to take scientists feeling distaste for dark matter are much like Galileo Galilei's colleagues who refused to look through the telescope to watch the Medici planets Nevertheless astronomers when required to take a ballot in favour of some cosmological model often still vote for pure baryonic with substantial majorities although most cosmologists assume that a cold component of dark matter plays a role in producing the world as we observe it Among the many subjects covered by the book particular emphasis was given to 1 summarizing the current status of the observations both of the distribution of the nearby galaxies and of the evolution of more distant galaxies 2 advanced statistical techniques for quantifying structure in galaxy redshift and peculiar velocity surveys 3 the art of cosmic inflation and models for dark matter candidates and their implications for cosmic microwave background observations 4 implications of cold dark matter variants for large scale structure as worked out both by quasi linear techniques and by fully nonlinear simulations and 5 Eulerian and Lagrangian approximations for treating the nonlinear dynamics

Hot Hadronic Matter Jean Letessier, Hans H. Gutbrod, Johann Rafelski, 2012-12-06 The past decade has seen the development of the operational understanding of fundamental interactions within the standard model This has detoured our attention from the great enigmas posed by the dynamics and collective

behavior of strongly interacting particles Discovered more than 30 years ago the thermal nature of the hadronic particle spectra has stimulated considerable theoretical effort which so far has failed to confirm on the basis of microscopic interactions the origins of this phenomenon However a highly successful Statistical Bootstrap Model was developed by Rolf Hagedorn at CERN about 30 years ago which has led us to consider the boiling hadronic matter as a transient state in the transformation of hadronic particles into their melted form which we call Quark Gluon Plasma QGP Today we return to seek detailed understanding of the thermalization processes of hadronic matter equipped on the theoretical side with the knowledge of the fundamental strong interaction theory the quantum chromodynamics QCD and recognizing the important role of the complex QCD vacuum structure On the other side we have developed new experimental tools in the form of nuclear relativistic beams which allow to create rather extended regions in space time of Hot Hadronic Matter The confluence of these new and recent developments in theory and experiment led us to gather together from June 27 to July 1 1994 at the Grand Hotel in Divonne les Bains France to discuss and expose the open questions and issues in our field

Nonlinear Physical Phenomena - Proceedings Of The International Centre Of Condensed Matter Physics School Alvaro Ferraz, Fernando Oliveira, Roberto Osorio, 1990-11-30 Non linear effects are basically manifested in a variety of physical phenomena such as defect mediated transitions pattern formation growth of aggregates turbulence chemical reactions diffusion in porous media biological information processing etc Many non linear dynamical systems are extremely sensitive to small changes in the initial conditions Different routes to chaos have been established and a new geometry called fractal geometry has been developed The aim of this School is to review the

main achievements of the modern theory of irregular structures and to discuss the exciting new trends in non linear phenomena
