Wood Degradation and Ligninolytic Fungi, 2021-08-12 *Wood Degradation and Ligninolytic Fungi* Volume 99 summarizes current knowledge on wood degradation by fungi Chapters in this new release include Intracellular detoxification strategies of lignolytic fungi Cell signaling during wood degradation Evolution of ligninolytic systems in fungi Diversity and distribution of lignolytic fungi Fungal catalysts for lignin valorization applied aspects Expression of fungal lignocellulolytic genes in the environment Wood degradation in grapevine disease Imaging wood degradation Lignin degradation by ascomycetes and more The increasing interest for wood decaying fungi over the past few years has sparked great potential for their use in biomass valorization their important function in global carbon cycle and for the damages they can cause on wood materials hence this new release includes updates on these and related topics Based on recent research and genomic data Presents the multidisciplinary aspects of wood degradation Deals with regulation and adaptation of fungi in the complex environment of wood

WOOD DETERIORATION PROTECTION AND MAINTENANCE Wood has low embodied energy is a renewable resource and can perform extremely well in a range of construction applications so it is not surprising that there is growing interest in the use of wood in new buildings As a natural material wood can be subject to degradation by a range of environmental factors insects bacteria or fungi Advances in the understanding of the degradation processes caused by these factors as well as increased knowledge about boundary environmental conditions and the extractives that suppress the development of timber pests have led to new methods of structural physical and chemical protection of wood and wooden composites The result is that wood can deliver high performance long life buildings and structures with low environmental impact at relatively modest cost **Wood Deterioration Protection and Maintenance** provides an up to date discussion of the natural durability of wood wood degradation processes and methods of structural physical and chemical protection of wood The important information relating to wood degradation by abiotic and biotic agents in the context of the basic structure of wood is fully discussed showing how structural changes in damaged wood relate to physical and mechanical properties Modern active substances in wood protection and the relationships between preservative properties the anatomical structure and moisture content of wood and protective processes involving pressure and or diffusion driving forces are fully illustrated Mentioned also are principles of wood maintenance together with modes of damaged wood identification sterilization and reconstruction
