

	Covalent Bonds	Ionic Bonds
State at room temperature:	gases, liquids or low-melting solids	Crystalline solids
Polarity:	Low	High
Solubility	Few are soluble in water; Many are soluble in organic liquids	Many are water soluble; Not soluble in organic liquids
Formation:	A covalent bond is formed between two non-metals that have similar electronegativities. Neither atom is "strong" enough to attract electrons from the other. For stabilization, they share their electrons from outer molecular orbit with others	An ionic bond is formed between a metal and a non-metal. Non-metals(-ve ion) are "stronger" than the metal(+ve ion) and can get electrons very easily from the metal. These two opposite ions attract each other and form the ionic bond.
Conductivity:	Do not conduct electricity	Conduct electricity when molten or dissolved in water
Melting point:	Low	High
What is it?:	Covalent bonding is a form of chemical bonding between two non metallic atoms which is characterized by the sharing of pairs of electrons between atoms and other covalent bonds.	Ionic bond, also known as electrovalent bond, is a type of bond formed from the electrostatic attraction between oppositely charged ions in a chemical compound. These kinds of bonds occur mainly between a metallic and a non metallic atom.
Boiling point:	Low	High
Examples:	Methane (CH_4), Hydrochloric acid (HCl)	Sodium chloride (NaCl), Sulfuric Acid (H_2SO_4)
Occurs between:	Two non-metals or a non-metal and a metalloid	One metal and one non-metal

Structures Strengthened with Bonded Composites Zhishen Wu, Yufei Wu, Mohamed F.M. Fahmy, 2020-07-15

Structures Strengthened with Bonded Composites presents a comprehensive resource on the strengthening of concrete reinforced and prestressed concrete masonry steel and other composite structures using externally bonded FRP composites. The book emphasizes a systematic and fundamental investigation on bonding and debonding behavior of the FRP concrete interface and structural performances of FRP strengthened structures with a combination of experimental theoretical and numerical studies. This book will appeal to all those concerned with strengthening and retrofitting of existing structures from the effect of additional anticipated loads in the civil sector. Discusses the FRP strengthening of different types of structures including bridges tunnels buildings historic structures and underwater constructions. Establishes a systematic theory on interfacial fracture mechanics and clarifies different debonding mechanisms. Describes design methods and makes comparison of design considerations and methods among different countries. Presents temperature and fatigue effects and long term behavior for different strengthening methods. Specifications - Bureau of Reclamation United States. Bureau of Reclamation,

Computational Modelling of Concrete Structures Günther Meschke, Bernhard Pichler, Jan Rots, 2018-01-31. The EURO C conference series Split 1984 Zell am See 1990 Innsbruck 1994 Badgastein 1998 St Johann im Pongau 2003 Mayrhofen 2006 Schladming 2010 St Anton am Arlberg 2014 and Bad Hofgastein 2018 brings together researchers and practising engineers concerned with theoretical algorithmic and validation aspects associated with computational simulations of concrete and concrete structures. Computational Modelling of Concrete Structures reviews and discusses research advancements and the applicability and robustness of methods and models for reliable analysis of complex concrete reinforced concrete and pre stressed concrete structures in engineering practice. The contributions cover both computational mechanics and computational modelling aspects of the analysis and design of concrete and concrete structures. Multi scale cement and concrete research experiments and modelling. Aging concrete from very early ages to decades long durability. Advances in material modelling of plain concrete. Analysis of reinforced concrete structures. Steel concrete interaction fibre reinforced concrete and masonry. Dynamic behaviour from seismic retrofit to impact simulation. Computational Modelling of Concrete Structures is of special interest to academics and researchers in computational concrete mechanics as well as industry experts in complex nonlinear simulations of concrete structures. **Analysis and**

Design of Gravity Flow Conduits and Buried Bridges Timothy J. McGrath, 2024-12-20. This book covers the structural analysis and design of buried gravity flow conduits including traditional pipes arches box conduits and buried bridges with spans up to 80 ft 25 m and greater. The text primarily covers concrete corrugated metal and plastic conduits but is generally applicable to other materials. Applications include culverts storm drains sewers and pedestrian and vehicular crossings. The book is intended to introduce the subject to practitioners new to the field as well as provide detailed information for those

with prior experience The opening chapter presents historical background and basic design models to introduce important concepts and then follows with chapters devoted to materials soils soil conduit interaction and guidance on the use of finite elements for analysis Then design methods for evaluating soil conduit systems are presented along with guidance on important considerations during installation The book concludes with field experiences of when things went wrong and why Analysis and Design of Gravity Flow Conduits and Buried Bridges offers a unified and comprehensive guide for practicing engineers working on buried pipe design private consultants and product manufacturers as well as researchers in the area
