HLA-G-mediated Immune Tolerance: Past and New Outlooks Silvia Gregori, Joel LeMaout, 2017-02-14 The non classical HLA class I molecule HLA G is different from classical HLA class I molecules because of the low polymorphism in the coding region the fact that HLA G primary transcript is alternatively spliced in seven isoforms and the inhibitory action on immune cells Although HLA G is low polymorphic variants in both promoter and 3' untranslated region UTR of HLA G locus regulate its expression In healthy conditions a basal level of HLA G gene transcription is observed in most cells and tissues however translation into HLA G protein is restricted to trophoblasts in the placenta where it participates in promoting tolerance at the fetal maternal interface HLA G is also expressed by thymic epithelial cornea mesenchymal stem cells nail matrix pancreatic beta cells erythroid and endothelial precursors HLA G can be neo expressed in adult tissues in pathological conditions and its

expression has been documented autoimmune disorders viral infections and cancer In the latter setting de novo HLA G expression is associated with the capability of tumor cells to evade the immune control In the last decade it has become evident that HLA G expression on T cells and antigenpresenting cells confers to these cells tolerogenic properties This Research Topic focused on i summarizing updated clinical and immunological evidences that HLA G expression is associate with beneficial or detrimental tolerance ii gathering new insights into the mechanisms governing the expression of HLA G in healthy and pathological conditions such as pre eclampsia and iii examining the mechanisms underlying HLA G mediated tolerance
